Antioxidant-Antidiabetic Agents and Human Health Oluwafemi Oguntibeju,2014-02-05 The human system employs the use of endogenous enzymatic as well as non enzymatic antioxidant defence systems against the onslaught of free radicals and oxidative stress Enzymatic antioxidants and non enzymatic antioxidants work synergistically with each other using different mechanisms against different free radicals and stages of oxidative stress Dietary and lifestyle modifications are seen as the mainstay of treatment and management of chronic diseases such as diabetes mellitus The major aims of dietary and lifestyle changes are to reduce weight improve glycaemic

control and reduce the risk of coronary heart disease which accounts for 70-80% of deaths among those with diabetes. It is also important to note that medicinal plants have been used as medicines since ancient times and continue to play a significant role even in modern medicine in the management and treatment of chronic diseases. Impressive numbers of modern therapeutic agents have been developed from plants. Phytochemicals have been isolated and characterised from fruits such as grapes and apples, vegetables such as broccoli and onion, spices such as turmeric, beverages such as green tea and red wine as well as many other sources. The WHO estimates that approximately 80% of the world's inhabitants rely on traditional medicine for their primary health care and many medicinal plants have ethno-medical claims of usefulness in the treatment of diabetes and other chronic diseases globally and have been employed empirically in antidiabetic, antihyperlipidemic, antihypertensive, anti-inflammatory and antiparasitic remedies. This book examines the role of antioxidant-rich natural products in the management and treatment of diabetes and other chronic diseases.
