Autophagy in plants and algae Diane C Bassham, Jose L Crespo, 2015-05-15 Autophagy also known as macroautophagy is an evolutionarily conserved process by which cytoplasmic components are nonselectively enclosed within a double membrane vesicle known as the autophagosome and delivered to the vacuole for degradation of toxic components and recycling of needed nutrients This catabolic process is required for the adequate adaptation and response of the cell and

correspondingly the whole organism to different types of stress including nutrient starvation or oxidative damage Autophagy has been extensively investigated in yeasts and mammals but the identification of autophagy related ATG genes in plant and algal genomes together with the characterization of autophagy deficient mutants in plants have revealed that this process is structurally and functionally conserved in photosynthetic eukaryotes Recent studies have demonstrated that autophagy is active at a basal level under normal growth in plants and is upregulated during senescence and in response to nutrient limitation oxidative stress salt and drought conditions and pathogen attack Autophagy was initially considered as a non selective pathway but numerous observations mainly obtained in yeasts revealed that autophagy can also selectively eliminate specific proteins protein complexes and organelles Interestingly several types of selective autophagy appear to be also conserved in plants and the degradation of protein aggregates through specific adaptors or the delivery of chloroplast material to the vacuole via autophagy has been reported This research topic aims to gather recent progress on different aspects of autophagy in plants and algae We welcome all types of articles including original research methods opinions and reviews that provide new insights about the autophagy process and its regulation Non-viral Gene Therapy Kazunari

THE STRUCTURE AND FUNCTION OF GLYCOSYL HYDROLASES AND TREHALASES IN MYCOBACTERIUM TUBERCULOSIS AND ITS ROLE IN VIRULENCE. PHILIP IFESINACHI ANOCHIE,2018-08-30 Reports documented in biomedical literature indicates that Glycosyl hydrolases and trehalases in Mycobacteria especially in Mycobacterium tuberculosis may play a role in its virulence Enzymatic assays are required to see if one can detect specific enzyme activity in M tuberculosis through microbiological techniques protein expression and purification crystallization experiments glycosyl hydrolase and trehalase assays and gene cloning which will help to determine the role of the enzyme in virulence It will also enable us to identify the outer membrane protein required for the transport of lipopolysaccharides to the bacterial cell surface

RNAi Martin Latterich,2008-09-04 A key feature of RNAi is the highlighting of the pitfalls that can occur and how to minimize them The book also contains a complete list of abbreviations as there are many confusing terms associated with RNAi Jacket Structure and Plasticity of Protein-protein Interfaces in Factor Xa and the Androgen Receptor Eugene

Hur,2006 To better understand these issues in the context of the proteolytic blood coagulation cascade the structure of factor Xa FXa was solved in complex with a M84R variant of the macromolecular protease inhibitor ecotin The structure reveals the atomic mechanism of association Despite not possessing the recognition sequence of canonical FXa substrates ecotin binds FXa with pico molar affinity through a combination of induced fit and nonspecific secondary site interactions **Generation**

of cDNA Libraries Shao-Yao Ying, 2008-02-03 Since its invention and subsequent development nearly 20 years ago polymerase chain reaction PCR has been extensively utilized to identify numerous gene probes in vitro and in vivo However attempts to generate complete and full length complementary cDNA libraries were for the most part fruitless and remained elusive until the last decade when simple and rapid methods were developed With current decoding and potential application of human genome information to genechips there are urgent needs for identification of functional significance of these decoded gene sequences Inherent in bringing these applications to fruition is the need to generate a complete and full length cDNA library for potential functional assays of specific gene sequences *Generation of cDNA Libraries Methods and Protocols* serves as a laboratory manual on the evolution of generation of cDNA libraries covering both background information and step by step practical laboratory recipes for which protocols reagents operational tips instrumentation and other requirements are detailed The first chapter of the book is an overview of the basics of generating cDNA libraries which include the following a the definition of a cDNA library b different kinds of cDNA libraries c differences between methods for cDNA library generation using conventional approaches and novel strategies including reverse generation of RNA repertoires from cDNA libraries and d the quality of cDNA libraries **Arabidopsis Protocols, 2nd Edition** Julio Salinas, Jose J.

Sanchez-Serrano, 2008-02-04 For several decades *Arabidopsis thaliana* has been the organism of choice in the laboratories of many plant geneticists physiologists developmental biologists and biochemists around the world During this time a huge amount of knowledge has been acquired on the biology of this plant species which has resulted in the development of molecular tools that account for much more efficient research The significance that *Arabidopsis* would attain in biological research may have been difficult to foresee in the 1980s when its use in the laboratory started In the meantime it has become the model plant organism much the same way as *Drosophila* *Caenorhabditis* or mouse have for animal systems Today it is difficult to envision research at the cutting edge of plant biology without the use of *Arabidopsis* Since the first edition of *Arabidopsis Protocols* appeared new developments have fostered an impressive advance in plant biology that prompted us to prepare *Arabidopsis Protocols Second Edition* Completion of the *Arabidopsis* genome sequence offered for the first time the opportunity to have in hand all of the genetic information required for studying plant function In addition the development of whole systems approaches that allow global analysis of gene expression and protein and metabolite dynamics has encouraged scientists to explore new scenarios that are extending the limits of our knowledge *Primary and Stem Cells*
