Environmental Effects of Offshore Oil Production Brian S. Middleditch, 2012-12-06 The Buccaneer Gas and Oil Field Study has been the most comprehensive research project to date concerned with assessing the ecological effects of offshore production activities It took nearly five years to complete and involved almost 30 individual research groups All of the raw data have been archived with NOAA's Environmental Data and Information Services and detailed technical reports have been deposited with the National Technical Information Service so the interested investigator should be able to gain access to them However we felt that it would be desirable to present a distillation of our more significant findings in a form that was more readily available to

the scientific and lay community Thus we conducted a symposium on the study during EXPOCHEM 80 at the Astrohall Houston Texas during October 1980 This volume comprises the proceedings of that symposium All but two of the papers presented are included in this book Manuscripts were not received from Dr D A Wiesenburg Texas A M University Volatile Hydrocarbons or Dr J Tillery Southwest Research Institute Trace Metals but these topics are adequately covered by other authors An introductory chapter was added to place the study in its proper perspective and to provide some background material on the Buccaneer Field a brief chapter on biocides was inserted since this topic generated much discussion at the symposium and a bibliography is provided to direct the interested reader to sources of additional information on the Study
