Design of Integrally-Attached Timber Plate Structures Yves Weinand, 2021-09-26 Design of Integrally Attached Timber Plate Structures outlines a new design methodology for digitally fabricated spatial timber plate structures presented with examples from recent construction projects It proposes an innovative and sustainable design methodology algorithmic geometry processing structural optimization and digital fabrication technology transfer and construction are formulated and widely discussed The methodology relies on integral mechanical attachment whereby the connection between timber plates is established solely through geometric manipulation without additional connectors such as nails screws dowels adhesives or welding The transdisciplinary design framework for spatial timber plate structures brings together digital architecture computer science and structural engineering covering parametric modeling and architectural computational design geometry exploration the digital fabrication assembly of engineered timber panels numerical simulations mechanical characterization design optimization and performance improvement The method is demonstrated through different prototypes physical models and three build examples focusing specifically on the design of the timber plate roof structure of 23 large span arches called the Annen Headquarters in Luxembourg This is useful for the architecture engineering and construction AEC sector and shows how new structural optimization processes can be reinvented through geometrical adaptations to control global and local geometries of complex structures This text is ideal for structural engineering professionals and architects in both industry and academia and construction companies

Structural Design James R. Underwood, Michele Chiuini, 2011-11-07 Written for the practicing architect Structural Design addresses the process on both a conceptual and a mathematical level

Most importantly it helps architects work with structural consultants and understand all the necessary considerations when designing structural systems Using a minimum of simple math this book shows you how to make correct design calculations for structures made from steel wood concrete and masonry What's more this edition has been completely updated to reflect the latest design methods and codes including LRFD for steel design The book was also re designed for easy navigation Essential principles as well as structural solutions are visually reinforced with hundreds of drawings photographs and other illustrations making this book truly architect friendly
