**Design Against Blast** S. Syngellakis, 2013 Terrorist attacks and other destructive incidents caused by explosives have in recent years prompted considerable research and development into the protection of structures against blast loads For this objective to be achieved experiments have been performed and theoretical studies carried out to improve our assessments of the intensity as well as the space time distribution of the resulting blast pressure on the one hand and the consequences of an explosion to the exposed environment on the other This book aims to enhance awareness on and understanding of these topical issues through a collection of relevant Transactions of the Wessex Institute of Technology articles written by experts in the field The book starts with an overview of key physics based algorithms for blast and fragment environment characterisation structural response analyses and structural assessments with reference to a terrorist attack in an urban environment and the management of its inherent uncertainties A subsequent group of articles is concerned with the accurate definition of blast pressure which is an essential prerequisite to the reliable assessment of the consequences of an explosion Other papers are concerned with alternative methods for the determination of blast pressure based on experimental measurements or neural networks A final group of articles reports investigations on predicting the response of specific structural entities and their contents The book concludes with studies on the effectiveness of steel reinforced polymer in improving the performance of reinforced concrete columns and the failure mechanisms of seamless steel pipes used in nuclear industry

CAE Design and Failure Analysis of Automotive Composites Srikanth Pilla, 2014-12-03 Composites are now extensively used in applications where outstanding mechanical properties are necessary in combination with weight savings due to their highly tunable microstructure and mechanical properties These properties present great potential for part integration which results in lower manufacturing costs and faster time to market Composites also have a high level of styling flexibility in terms of deep drawn panel which goes beyond what can be achieved with metal stampings The so called multifunctional or smart composites provide significant benefits to the vehicles as compared to the traditional materials that only have monotonic properties CAE Design and Failure Analysis of Automotive Composites focuses on the latest use of CAE Computer Aided Engineering methods in design and failure analysis of composite materials and structures beginning with a brief introduction to the design and failure analysis of composite materials and then presenting some recent innovative CAE design examples of composite structures by engineers from major CAE developers and automobile OEMs and suppliers This title brings together 12 SAE technical papers carefully selected by
