Design with Climate Victor Olgyay, 2015-09-01 Architects today incorporate principles of sustainable design as a matter of necessity. But the challenge of unifying climate control and building functionality of securing a managed environment within a natural setting and combating the harsh forces of wind, water, and sun presented a new set of obstacles to architects and engineers in the mid twentieth century. First published in 1963, *Design with Climate* was one of the most pioneering books in the field and remains an important reference for practitioners, teachers, and students over fifty years later. In this book, Victor Olgyay explores the impact of climate on shelter design, identifying four distinct climatic regions and explaining the effect of each on orientation, air movement, site, and materials. He derives principles from biology, engineering, meteorology, and physics and demonstrates how an analytical approach to climate management can merge into a harmonious and aesthetically sound design concept. This updated edition contains four new essays that provide unique insights on issues of climate design, showing how Olgyay's concepts work in contemporary practice. Ken Yeang, John Reynolds, Victor W. Olgyay, and Donlyn Lyndon explore bioclimatic design, eco design, and rational regionalism while paying homage to Olgyay's impressive groundwork and contributions to the field of architecture.

[Bioclimatic Approaches in Urban and Building Design](#) Giacomo Chiesa, 2021-01-04 This book explores the bioclimatic approach to building design. Constant innovations in the field are evident, including the need to face climate changes and increase the local resilience at different scales: regional, urban, architectural. Differently from other contributions, this book provides a definition of the bioclimatic design approach following a technological and performance-driven vision. It includes one of the largest collections of research voices on the topic, becoming also a critical reference work for bioclimatic theory. It is intended for architects, engineers, researchers, and technicians who have professional and research interests in bioclimatic and in sustainable and technological design issues.

Design for Climate Change Bill Gething, William Gething, Katie Puckett, 2013 Adapting to climate change is a pressing concern for the construction sector Our built environment and the way buildings are designed constructed and managed has evolved in response to a climate that has been broadly consistent for hundreds of years to come Within a generation our buildings may have to cope under very different conditions *Climate Design* AECOM (Firm), 2010 A collection of works from academics and AECOM's thought leaders Cover The Green Imperative: Ecology and Ethics in Design and Architecture Victor Papanek, 2022-02-01 A fresh edition of the sustainable design pioneer Victor Papanek's classic and ever relevant book examining the important role of design in combating climate change Whether it's horror at the plastic littering the world's beaches or despair at the melting polar ice caps the world is gradually waking up to the impending climate disaster In *The Green Imperative* Papanek argues for design that addresses these issues head on This means using materials that can be recycled and reused no more pointless packaging thinking about how products make us feel and engage all our senses putting nature at the heart of design working at a smaller scale rejecting aesthetics for their own sake

and thinking before we buy First published at the end of the twentieth century this book offered a plethora of honest advice clear examples and withering critiques laying out the flaws of and opportunities for the design world at that time A quarter of a century on Papanek s lucid prose has lost none of its verve and the problems he highlights have only become more urgent giving today s reader both a fascinating historical perspective on the issues at hand and a blueprint for how they might be solved
