Design of Adaptive Organizations Nobuo Takahashi, 2012-12-06 Organization design has been discussed by many authors in management and organization theory They have obtained intuitive and prescriptive propositions appealing that the best organization design is contingent on the environmental conditions But their studies called contingency theory are mostly

based on empirical research Most of the propositions are drawn as only inferences from the results of them On the other hand decision theoretic models of organizations in the stochastic environment have been studied by some economists and management scientists independently of contingency theory In this book important aspects of organization design problems are formulated as statistical decision problems in the framework of management and organization theory Part One of this book analyzes a short run adaptive problems of the organization design Part One contains an expanded exposition of the ideas and results published in the professional journals and I would like to thank the anonymous reviewers of the following journals Behaviormetrika Human Relations Behavioral Science Part Two of this book considers a long run adaptive process in the organization and has not previously been published in its IV present form although a version of this part is to appear in Journal of the Department of Liberal Arts March 1987 The University of Tokyo The results of Part One and Part Two are supported by the empirical research on Japanese firms in Part Three This research was financially supported by Nippon Telegraph and Telephone Public Corporation NTT I acknowledge this gratefully **Building Energy Efficiency**, 1992
