Student Study Guide and Solutions Manual for General Physics Morton M. Sternheim, 1986 Force and Motion Jason Zimba, 2009-06-01 Isaac Newton developed three laws of motion that govern the everyday world. These laws are usually presented in purely mathematical forms but Jason Zimba breaks with tradition and treats them visually. This unique approach allows students to appreciate the conceptual underpinnings of each law before moving on to qualitative descriptions of motion and finally to the equations and their solutions. Zimba has organized the book into seventeen brief and well sequenced lessons which focus on simple manageable topics and delve into areas that often cause students to stumble. Each lesson is followed by a set of original problems that have been student tested and refined over twenty years. Zimba illustrates the laws with more than 350 diagrams an innovative presentation that offers a fresh way to teach the fundamentals in introductory physics mechanics and kinematics courses
