Assisted Living Aging Motion Cognition Emotion and Learning   <u>Challenges for Assistive Technology</u> Gorka Eizmendi,José Miguel Azkoitia,Ger M. Craddock,2007 In the 21st century Assistive Technology AT should be defined as a scientific and technologic approach to the development of products and services oriented to support the elderly and people with disabilities in their daily activities maximizing their personal autonomy independence health and quality of life   *The Collective Spirit of Aging Across Cultures* Halaevalu F.Ofahengaue Vakalahi,Gaynell M. Simpson,Nancy Giunta,2014-01-28 The collective inclusive and intersectional framework used in this book speaks to the significance of understanding aging across diverse cultures from multiple perspectives but still as a shared human experience The underlying message of the book is that although we are unique and different in our aging processes we are ultimately connected through this physical mental and spiritual experience of aging Thus regardless of whether we are service providers service recipients educators or merely fellow human beings it is important that we approach the aging experience through a collective lens for discovering and sharing resources as we age honoring the past while simultaneously accepting that the future is here A few select examples of key findings from this collaborative work are as follows First despite progress in the field certain issues remain to be addressed including the challenges of racism and sexism mistreatment the digital divide poverty and other social and economic crises in urban and rural communities as they relate to our aging population Second the need for sustaining a sense of independence among the aged and interdependence among supportive systems is warranted Third our elders continue to benefit from culturally competent services community based health interventions and social services that addresses normative and emerging challenges for them Fourth spirituality in both indigenous and contemporary perspectives remains important for our elders development and quality of life   **The SAGE Handbook of Human–Machine Communication** Andrea L. and colleagues When looking at it this way it is strange that disability continues to be thought of as an anomaly either as a medical problem located in a damaged body or something that exists exclusively outside the body in a society that takes little account of non normative bodies Critical disability studies both questions these existing notions of disability and interrogates how they have become a part of the academic attitude towards the field As the first comprehensive handbook on critical disability studies this volume provides an authoritative overview of the subject Including 32 chapters written by established scholars and emerging next generation researchers it also includes contributions from activists writers and practitioners from the global north and the global south Divided into three parts Representation art and culture Media technology and communication and Activism and the life course it offers discussions on core critical disability studies topics including the social model technology studies trauma studies representation and queer theory as well as ground breaking work on emerging and cutting edge areas such as neurodiversity and critical approaches in the Middle East United States Australia and Europe It is required reading for all academics and students working in not just critical disability studies but sociology digital accessibility and inclusion health and social care and social and public policy more broadly **Machine Ethics** Michael Anderson,Susan Leigh Anderson,2011-05-09 The new field of machine ethics is concerned with giving machines ethical principles or a procedure for discovering a way to resolve the ethical dilemmas they might encounter enabling them to function in an ethically responsible manner through their own ethical decision making Developing ethics for machines in contrast to developing ethics for human beings who use machines is by its nature an interdisciplinary endeavor The essays in this volume represent the first steps by philosophers and artificial intelligence researchers toward explaining why it is necessary to add an ethical dimension to machines that function autonomously what is required in order to add this dimension philosophical and practical challenges to the machine ethics project various approaches that could be considered in attempting to add an ethical dimension to machines work that has been done to date in implementing these approaches and visions of the future of machine ethics research Manifestos for the Future of Critical Disability Studies Katie Ellis,Rosemarie Garland-Thomson,Mike Kent,Rachel Robertson,2018-10-03 This collection identifies the key tensions and conflicts being debated within the field of critical disability studies and provides both an outline of the field in its current form and offers manifestos for its future direction Traversing a number of disciplines from science and technology studies to maternal studies the collection offers a transdisciplinary vision for the future of critical disability studies Some common thematic concerns emerge across the book such as digital futures the usefulness of anger creativity family as disability allies intersectionality ethics eugenics accessibility and interdisciplinarity However the contributors who write as either disabled people or allies do not proceed from a singular approach to disability often reflecting different or even opposing positions on these issues Containing contributions from established and new voices in disability studies outlining their own manifesto for the future of the field this book will be of interest to all scholars and students working within the fields of disability studies
