## Design Discourse and Discourse Design: Reflections on "Conveyence Matter"

### Introduction

The traditional distinctions between theory and practice, as well as the differentiations among the applied (angewandte), practical, and theoretical, are questionable and fuzzy when viewed against the backdrop of the evolution of applied arts discourse (design discourse) during the 20<sup>th</sup> and at the beginning of the 21st centuries. The same can be said of the tradition of science and design, for example, design models for theories could also be framed as discourse design in science. If we compare these models with current design discourse, we can follow design discourse as a science of design, that body of work which attempts to improve our understanding of "scientific" design methods of investigation, or a design science, an explicitly organized, rational and wholly systematic approach to design, or even a science *for* design, that is, a systematic collection of accounts of successful design practices, design methods, and their lessons (Nigel Cross 2001: 51,52). But within the context of a comparative analysis of discourse design and design itself, the distinctions become quite fuzzy.

An example of a theoretical discourse work, which is simultaneously a design work because it also contains theory design, is Helmut Krippendorff's Semantic Turn, which focuses on the trajectory of artificiality, a trajectory that Krippendorff constructs by following the development of design in the 20<sup>th</sup> century. Krippendorff identifies changes in the development which he relies on for his trajectory: It moves from products to goods and services, then to identities, to interfaces, to multi-user systems and networks, to projects, and finally to the discourses we are currently involved in (Krippendorff 2006: 6).

This proposed development offers us an interesting illustration to work with, especially if we wish to evaluate contemporary assignments in which designers are involved, since designers are not only involved in traditional design discourse, which uses drawings and objects to project solutions, but contemporary designers are also being challenged in purely theoretical language discourses to create meaning from proposed designs. Furthermore, discourses reside in those communities of people who join together to enact that what constitutes their community. They perform it, so to speak, and thereby create everything that matters to the members of the community (Krippendorff 2006: 11).

### Design and Discourse

We can therefore also claim, as does Krippendorff, that artifacts become increasingly embedded in language (Krippendorff 2006: 12, 13). And he acknowledged that meaning matters, since it is a move towards human-centeredness. All designs objects need to be communicated and understood—and therefore interpreted.

Within Krippendorff's proposed trajectory of artificiality, the development of design moves toward a culture of discourse in which designers—like philosophers or other professional thinkers— participate in making sense of things. Krippendorff locates the designer and his work within a general

## **Design Discourse Design Discourse:**

**Design Discourse** Victor Margolin, 1989-09-15 The editor has gathered together a body of writing in the emerging field of design studies The contributors argue in different ways for a rethinking of design in the light of its cultural significance and its powerful position in today's society The collection begins with a discussion of the various expressions of opposition to the modernists purist approach toward design Drawing on postmodernist theory and other critical strategies the writers examine the relations among design technology and social organization to show how design has become a complex and multidisciplinary activity The second section provides examples of new methods of interpreting and analysing design ranging from rhetoric and semiotics to phenomenology demonstrating how meaning is created visually A final section related to design history shifts its emphasis to ideological frameworks such as capitalism and patriarchy that establish boundaries for the production and use of design

**Graphic Design Discourse** Henry Hongmin Kim, 2018-03-20 If the aim of graphic design is to communicate meaning clearly there's an irony that the field itself has struggled between two contradictory opposites rote design resulting from a rigorous fixed set of rules and eccentric design that expresses the hand of the artist but fails to communicate with its audience But what if designers focused on process and critical analysis over visual outcome Through a carefully selected collection of more than seventy five seminal texts spanning centuries and bridging the disciplines of art architecture design history philosophy and cultural theory Graphic Design Discourse Evolving Theories Ideologies and Processes of Visual Communication establishes a new paradigm for graphic design methodologies for the twenty first century This illuminating anthology is essential reading for practicing designers educators and students trying to understand how to design in a singular expressive way without forgoing clear and concise visual communication

Design Discourse David Franke, Alex Reid, 2010-10-06 Design Discourse Composing and Revising Programs in Professional and Technical Writing addresses the complexities of developing professional and technical writing programs The essays in the collection offer reflections on efforts to bridge two cultures what the editors characterize as the art and science of writing often by addressing explicitly the tensions between them Design Discourse offers insights into the high stakes decisions made by program designers as they seek to function at the intersection of the practical and the abstract the human and the technical

Good as We Know it Garreth C. Blackwell, 2017 This dissertation examines the ways in which design and design practitioners have defined value in the design discourse through the vocabulary and concept of goodness since 1870 These definitions of value have been central to design discourse both past and present and deal with the impact and purpose of design work as well as its role in the creation of the approaching future Since before the coalescence of graphic design as a separate field of design these questions have been tied to the form function or social impact of the objects created by designers Despite the prevalence of this line of inquiry in the discourse current usage tends toward uncritical and uninformed usage because of a separation of the terminology from the historical context in which this conversation

developed The purpose of this investigation then is not to segment terms into right or proper definitions but to apply a critical historical lens to the vocabulary of goodness as it has been used in the larger design discourse since 1870 in order to better understand the state of current discussions of value and to inform paths of future inquiry In order to do so this investigation developed a framework by which to understand the ways in which goodness has been contextualized over the last 150 years This historical context does not limit us to a historicist approach to design and it not presented as an essentialist or teleological marker of things to come Instead knowledge of the historical context and various uses of a term makes us better educated practitioners of design who are more capable of combating the individualistic fallacy of the enlightened genius Through a fuller knowledge of the critical historical context in which our field s vocabulary developed we can better understand notions of creativity that position designers as expert guides through networks of information and meaning

and to nationalise modern design Bringing the discussion up towards the present the book concludes with an examination of how Norway's new found wealth has profoundly changed the production mediation and consumption of design

**The Disobedience of Design** Gui Bonsiepe, 2021-12-02 This volume presents for the first time in English a curated selection of writings by the design thinker Gui Bonsiepe from the 1960s to the present day Addressing as it does questions of non Western design and a design practice that is both radical and democratic Bonsiepe's work has assumed new importance for current debates inspired by global political and environmental crises Structured into three sections the anthology first addresses Bonsiepe's work on design theory and practice particularly in relation to the history and contemporary relevance of the Ulm design school where Bonsiepe was a professor in the 1960s A second section then represents Bonsiepe's writings after his move to South America in the 1960s and 70s where he worked as a design consultant for the Allende government in Chile before the military takeover In writings from the period Bonsiepe explores the concept of design at the periphery and the relationship of national design traditions and practices in Latin American countries to those of the core Western European and American design The final section comprises selections of Bonsiepe's writings on design in relation to literacy and language visuality and cognition This indispensable volume includes new interviews with Bonsiepe as well as his original previously unpublished texts

**Designing Organization Design** Rodrigo Magalhães, 2020-10-16 As a topic organization design is poorly understood While it is featured in most management books as a chapter dedicated to organizational structures it is unclear whether organization design is a one off event or an ongoing process Thus it has traditionally been understood to be the same as an organizational configuration with neat lines of communication and distribution of responsibilities following pre set typologies Yet what can be said to constitute organizational structure in this first half of the 21st century The extraordinary growth of digital communications the decreasing relevance of hierarchical bureaucracies and the general demise of command and control have all but decimated the traditional notion of organizational structure Organization design needs a theoretical revamping Using a mix of design and social science theories and concepts Rodrigo Magalhães outlines a new human centric interpretation of design design principles and design culture He puts forward a paradigm where the organization for purposes of its design is considered to be a social actor in a permanent state of transformation with significant repercussions for social and economic life He also proposes a model of leaderful organization design distinguished as practice based guided by values of democratic participation and driven by design logics which places meaning making and meaning taking at the center of organizational life and can be adopted and adapted to suit different environments

**Networks of Design** Jonathan Glynn, Fiona Hackney, Minton, Viv, 2010-06 Networks of Design maps a new methodological territory in design studies conceived as a field of interdisciplinary inquiry and practice informed by a range of responses to actor network theory It brings together a rich body of current work by researchers in the social

sciences technology material culture cultural geography information technology and systems design and design theory and history This collection will be invaluable to students and researchers in many areas of design studies and to design practitioners receptive to new and challenging notions of what constitutes the design process Over ninety essays are thematically organised to address five aspects of the expanded notions of mediation agency and collaboration posited by network theory Ideas Things Technology Texts and People The collection also includes an important new essay on rethinking the concept of design by Bruno Latour one of the most influential figures in the philosophy and sociology of science and technology and a pioneer of actor network theory and essays deriving from forum discussions involving designers and designer makers responsive to actor network theory Rather than an anthology of previously published essays Networks of Design presents work in progress on design theory and its applications It is the outcome of a live and vigorous debate on the possibilities and actualities offered by actor network led conceptualisations of the relationships and processes constituting design All the essays many collaborative derive from papers presented at the international conference of the Design History Society held at University College Falmouth UK in the Autumn of 2008

**Design-inspired Innovation** James M Utterback, Sten Ekman, Susan Walsh Sanderson, Bengt-arne Vedin, Roberto Verganti, Bruce Tether, Eduardo Alvarez, 2006-12-01 When an innovation is inspired by design it transcends technology and utility The design delights the user seamlessly integrating the physical object a service and its use into something whole A design inspired innovation is so simple that it becomes an extension of the user It creates meaning and a new language Design Inspired Innovation takes a unique look at the intersection between design and innovation and explores the novel ways in which designers are contributing to the development of products and services The book's scope is international with emphasis on design activities in Boston England Sweden and Milan Through a rich variety of cases and cultural prisms the book extends the traditional design viewpoint and stretches the context of industrial design to question and answer what design is really all about It gives readers tools for inspiration and shows how design can change language and even create human possibilities

The Design Productivity Debate Alex H.B. Duffy,2012-12-06 Over the past decade with greater emphasis being placed upon shorter lead times better quality products reduced product costs and greater customer satisfaction the topic of Engineering Design has received increased interest from the industrial and academic communities Considerable effort has been directed at developing design process methodologies and building computer tools that focus upon relatively narrow aspects of design but many key problems in Engineering Design research and practice remain unanswered Resulting from the First International Engineering Design Debate held in Glasgow UK in late 1996 this volume discusses the main issues concerning the improvement of design productivity Covering design studies design development concurrent engineering and design knowledge and information it attempts to derive a common understanding of the basic factors problems and potential solutions involved
