Ageing and Life Extension of Offshore Structures Gerhard Ersdal, John V. Sharp, Alexander Stacey, 2018-11-26 A comprehensive overview of managing and assessing safety and functionality of ageing offshore structures and pipelines A significant proportion estimated at over 50% of the worldwide infrastructure of offshore structures and pipelines is in a life extension phase and is vulnerable to ageing processes This book captures the central elements of the management of ageing offshore structures and pipelines in the life extension phase The book gives an overview of the relevant ageing processes and hazards how ageing processes are managed through the life cycle including an

overview of structural integrity management how an engineer should go about assessing a structure that is to be operated beyond its original design life and how ageing can be mitigated for safe and effective continued operation Key Features Provides an understanding of ageing processes and how these can be mitigated Applies engineering methods to ensure that existing structures can be operated longer rather than decommissioned unduly prematurely Helps engineers performing these tasks in both evaluating the existing structures and maintaining ageing structures in a safe manner The book gives an updated summary of current practice and research on the topic of the management of ageing structures and pipelines in the life extension phase but also meets the needs of structural engineering students and practicing offshore and structural engineers in oil gas and engineering companies In addition it should be of value to regulators of the offshore industry

Buildings and Structures under Extreme Loads Chiara Bedon, Flavio Stochino, Daniel Honfi, 2020-11-25 Exceptional loads on buildings and structures may have different causes including high strain dynamic effects due to natural hazards man made attacks and accidents as well as extreme operational conditions severe temperature variations humidity etc All of these aspects can be critical for specific structural typologies and or materials that are particularly sensitive to external conditions In this regard dedicated and refined methods are required for their design analysis and maintenance under the expected lifetime There are major challenges related to the structural typology and material properties with respect to the key features of the imposed design load Further issues can be derived from the need for risk mitigation or retrofit of existing structures as well as from the optimal and safe design of innovative materials systems Finally in some cases no appropriate design recommendations are available and thus experimental investigations can have a key role within the overall process In this Special Issue original research studies review papers and experimental and or numerical investigations are presented for the structural performance assessment of buildings and structures under various extreme conditions that are of interest for design
