

The background of the cover is a light blue textured surface. Overlaid on this is a faint, stylized map of a city or region. A prominent feature is a grid of lines, possibly representing a coordinate system or a map projection, which is centered and extends across the upper half of the cover. The grid lines are thin and light-colored, blending into the background map.

## **Designed Maps A Sourcebook For Gis Users:**

*Designed Maps* Cynthia A. Brewer, 2008 This sequel to the highly successful *Designing Maps* offers a graphics intensive presentation of published maps providing cartographic examples that GIS users can then adapt for their own needs Each chapter characterizes a common design decision and includes a demonstration map which is annotated with specific information needed to reproduce the design such as text fonts sizes and styles line weights colors and patterns marker symbol fonts sizes and colors and fill colors and patterns Visual hierarchies and the purpose of each map are considered with the audience in mind drawing a clear connection between intent and design The book also includes a valuable task index that explains what ArcGIS 9 tools to use for desired cartographic effects From experienced cartographers to those who make GIS maps only occasionally all GIS users will find this book to be an indispensable resource *Designing Better Maps* Cynthia A. Brewer, 2016 *Designing Better Maps A Guide for GIS Users* second edition breaks down the myriad decisions involved in creating maps that communicate effectively The second edition includes updated material and a new chapter on map publishing

**Interacting with Geospatial Technologies** Mordechai (Muki) Haklay, 2015-10-26 This book provides an introduction to HCI and usability aspects of Geographical Information Systems and Science Its aim is to introduce the principles of Human Computer Interaction HCI to discuss the special usability aspects of GIS which designers and developers need to take into account when developing such systems and to offer a set of tried and tested frameworks matrices and techniques that can be used within GIS projects Geographical Information Systems and other applications of computerised mapping have gained popularity in recent years Today computer based maps are common on the World Wide Web mobile phones satellite navigation systems and in various desktop computing packages The more sophisticated packages that allow the manipulation and analysis of geographical information are used in location decisions of new businesses for public service delivery for planning decisions by local and central government Many more applications exist and some estimate the number of people across the world that are using GIS in their daily work at several millions However many applications of GIS are hard to learn and to master This is understandable as until quite recently the main focus of software vendors in the area of GIS was on the delivery of basic functionality and development of methods to present and manipulate geographical information using the available computing resources As a result little attention was paid to usability aspects of GIS This is evident in many public and private systems where the terminology conceptual design and structure are all centred around the engineering of GIS and not on the needs and concepts that are familiar to the user This book covers a range of topics from the cognitive models of geographical representation to interface design It will provide the reader with frameworks and techniques that can be used and description of case studies in which these techniques have been used for computer mapping application
