This volume is the third in a series of books that Battles Book Reviews Publishing is releasing that encompass reprints of public domain US Military manuals that are useful to the prepping community This book contains the full text and images contained within the July 2013 version of Field manual 10 16 General Fabric Repair This may seem a strange choice for inclusion in a series of military manuals chosen for their usefulness in disaster SHTF scenarios However if you stop think it makes a certain kind of sense How many people are sewing experts While this manual talks about machine sewing it also has an extensive section on hand sewing with a discussion of the minimum required tools to make field expedient repairs to fabric items from clothing to tentage skills that are seldom used in normal life but can come in very handy when what you have with you is all that you are going to have The contents of this volume are a faithful cleaned up edition of this manual that has been formatted to fit the paper size Further volumes in this series are forthcoming Recovery and Battle Damage Assessment and Repair (FM 4-30. 31 / MCRP 4-11. 4A) Department of the Army,U.S. Marine Corps,2012-11-12 This manual Recovery and Battle Damage Assessment and Repair FM 4 30 31 provides the authoritative doctrine guidance on using recovery and repair assets on the battlefield Practical methods of recovering or repairing equipment disabled or immobilized due to hazardous terrain mechanical failure or a hostile action are also addressed Field manual FM 4 30 31 is directed toward both the leader and the technician Tactically it provides an overview of how recovery and battle damage assessment and repair BDAR assets are employed on the battlefield Technically it provides principles of resistance and mechanical applications to overcome them Equipment rigging techniques and expedient repairs are summarized as a refresher for recovery trained military personnel and as general guidance for others The procedures and doctrine in this manual apply to both wartime operations and military operations other than war Normally BDAR should be used when and where standard maintenance practices are not practical because of the mission enemy terrain and weather troops and support available time available civil considerations METT TC or METT T space and logistics METT TSL for USMC BDAR is not intended to replace standard maintenance practices but rather to supplement them under certain conditions Standard maintenance procedures provide the best most effective means of returning disabled equipment to the operational commander provided adequate

time parts and tools are available High risk battle damage repairs involving possible danger to personnel or further damage to equipment are only permitted in emergencies normally in a battlefield environment and only when authorized by the unit commander or his designated representative The goal is to return a combat system to the battlefield in the least amount of time while minimizing danger to personnel and equipment BDAR techniques are not limited to simply restoring minimal functional combat capability If full mission capability can be restored expediently with a limited expenditure of time and assets it should be restored This decision is based on METT TC Some BDAR techniques if applied may result in shortened lifespan or further damage to components The commander must decide whether the risk of having one less piece of equipment outweighs the risk of applying a potentially destructive field expedient repair Each technique provides appropriate warnings and cautions which list the system s limitations caused by the action Personnel must use ground guides and extreme caution when operating recovery assets around or on an aircraft
