Today's librarians and information specialists know it's imperative that they keep up with new technologies. But not all technologies are equally important either within the library setting or to library patrons. So how does one decide which ones to pursue and integrate into services? In the uphill battle to stay current with new and emerging technologies, deciding which ones to pursue and integrate into services is a major challenge. A secondary problem is simply finding the time to consider the question. Readers of *Keeping Up with Emerging Technologies* will learn all of the best practices and skills to keep up with new technologies and to analyze the ability of specific technologies to meet recognized user needs all in this single source. You'll learn the best ways to gather information about new technologies and user needs to evaluate and analyze information to curate technology information for others to set up experiments and evaluate the results and to present your findings to persuade decision makers. Written by the former head of user experience at MIT's library system, this guidebook serves information professionals, educators, education technology specialists, and anyone with emerging technology or innovation in their job titles. It will also be useful for library administrators and those who manage these positions as well as for students seeking a technology-oriented or curriculum design career path in libraries.

bookdown Yihui Xie, 2016-12-12

bookdown Authoring Books and Technical Documents with R Markdown presents a much easier way to write books and technical publications than traditional tools such as LaTeX and Word. The bookdown package inherits the simplicity of syntax and flexibility for data analysis from R Markdown and extends R Markdown for technical writing so that you can make better use of document elements such as figures, tables, equations, theorems, citations, and references. Similar to LaTeX, you can number and cross-reference these elements with bookdown. Your document can even include live examples so readers can interact with them while reading the book. The book can be rendered to multiple output formats including LaTeX, PDF, HTML, EPUB, and Word, thus making it easy to put your documents online. The style and theme of these output formats can be customized. We used books and R primarily for examples in this book, but bookdown is not only for books or R. Most features introduced in this book also apply to other types of publications: journal papers, reports, dissertations, course handouts, study notes, and even novels. You do not have to use R either. Other choices of computing languages include Python, C, C++, SQL, Bash, Stan, JavaScript, and so on, although R is best supported. You can also leave out computing for example to write a fiction. This book itself is an example of publishing with bookdown and R Markdown, and its source is fully available on GitHub.
