1. Para realizar proceso de trazar la restitución nos balemos de la marca flotante que mide el paralaje entre el punto homólogo en el que se encuentra sobre las imágenes orientadas para que el software pueda calcular la altura como lo arías con la barra de paralaje pero a tiempo real. Seleccionas le layer que deseas usar y con ayuda del sistema de visión estereoscópico que cuentas en este caso anáglifos desplazas con el mouse la marca flotante (x,y) y sin perder la estereoscopia ajustas la altura del con el scroll del punto que quieras capturar y das clip para marcarlo como punto, vértice de línea o polígono según el layer que estés usando usas doble clip para finalizar una line o polígono.

2. Para poder editar los trazos los seleccionamos con la herramientas   siendo la primeras para seleccionar uno al ves y el segundo mediante un rectángulo, debemos recordar que para selecciona individualmente no basta con estar en las mismas coordenadas x,y también tenemos que estar en la misma altura z tras seleccionar lo que deseamos editar contamos con diversas herramientas de edición que se muestran en la siguiente imagen.

Forests and Landscapes Stephen Richard John Sheppard, Howard W. Harshaw, 2001-01-01 Forests are an important component in the visual appeal of landscapes. There is an increasing recognition of the importance of this subject among foresters and environmental scientists. Increasingly forest resource managers must consider the aesthetic consequences of timber harvesting operations and management plans. This book is the first to address this subject area. It consists of 15 chapters and is divided into four parts. It brings together not only foresters and ecologists but also landscape architects psychologists and philosophers. It should therefore attract a wide readership. Contributors are leading research workers in their subjects from Canada the USA and UK

Hydrologic Modeling Vijay P Singh, Shalini Yadav, Ram Narayan Yadava, 2018-01-19 This book contains seven parts. The first part deals with some aspects of rainfall analysis including rainfall probability distribution local rainfall interception and analysis for reservoir release. Part 2 is on evapotranspiration and discusses development of neural network models errors and sensitivity. Part 3 focuses on various aspects of urban runoff including hydrologic impacts storm water management and drainage systems. Part 4 deals with soil erosion and sediment covering mineralogical composition geostatistical analysis land use impacts and land use mapping. Part 5 treats remote sensing and geographic information system GIS applications to different hydrologic problems. Watershed runoff and floods are discussed in Part 6 encompassing hydraulic experimental and theoretical aspects. Water modeling constitutes the concluding Part 7. Soil and Water Assessment Tool SWAT Xinanjiang and Soil Conservation Service Curve Number SCS CN models are discussed. The book is of interest to researchers and practitioners in the field of water resources hydrology environmental resources agricultural engineering watershed management earth sciences as well as those engaged in natural resources planning and management. Graduate students and those wishing to conduct further research in water and environment and their development and management find the book to be of value

Spatial Analysis Paul A. Longley, Michael Batty, 1997-04-17 *Spatial Analysis Modelling in a GIS Environment* Edited by Paul Longley and Michael Batty. Digital data and information are used increasingly by academics professionals local authorities and government departments. Powerful new technologies such as geographic information systems GIS are being developed to analyse such data and GIS technologies are rapidly becoming part of the emergent world digital infrastructure. This book shows how computer methods of analysis and modelling built around GIS can be used to identify ways in which our

cities and regions might be better planned and understood. The contributors to this book are all actively involved in research using geographic information systems. This book will be valuable reading for geographers, researchers and regional analysts, population theorists and regional economists with interests in large scale demographic and employment data, planners and policy makers who wish to use GIS to improve their decision making, business analysts who wish to explore markets using the most recent advances in digital spatial data technology. All those interested in geodemographics. Paul Longley is Professor of Geography at the Department of Geography, University of Bristol, United Kingdom. Michael Batty is Professor of Spatial Analysis and Planning at the University College London, United Kingdom.

Digital Analysis of Remotely Sensed Imagery Jay Gao, 2009-05-01 An important text that identifies and introduces new trends in image analysis. Digital Analysis of Remotely Sensed Imagery provides thorough coverage of the entire process of analyzing remotely sensed data for the purpose of producing accurate representations in thematic map format. Written in easy to follow language with minimal technical jargon, the book explores cutting edge techniques and trends in image analysis as well as the relationship between image processing and other recently emerged special technologies.

Geoecology of Landscape Dynamics Seema Sahdev, R. B. Singh, Manish Kumar, 2020-03-03 This book provides an overview of the ecological indicators of landscape dynamics in the context of geographical landscape integration. Landscape dynamics depicts every change that occurs in the physical, biological and cognitive aspects of a landscape. To understand and interpret the complex physical, biological and cognitive phenomena of landscapes, it is necessary to operate conceptually and practically on a broad range of spatial and temporal scales. Rapid land use changes have become a concern to environmentalists and planners because of their impacts on the natural ecosystem, which further determines socioeconomic dynamics. In this regard, the book discusses case studies that share new insights into how landscape patterns and processes impact small creatures and how small creatures in turn influence landscape structure and composition. In turn, the relevant aspects of land use and land cover dynamics are covered, and the multifaceted relationship between the substrata and ecological community is highlighted. The book is unique in its focus on the application of spatial informatics, such as automatic building extraction from high resolution imagery, a soil resource inventory for meeting the challenges of land degradation, hydrological modeling, the temporal variation analysis of glacier area and the identification and mapping of glacial lakes, morphometric analysis of river basins and the monitoring and modeling of urban sprawl among other features.

Remote Sensing in Archaeology James R. Wiseman, Farouk El-Baz, 2007-06-04 Archaeology has been transformed by technology that allows one to see below the surface of the earth. This work illustrates the uses of advanced technology in archaeological investigation. It deals with hand held instruments that probe the subsurface of the earth to unveil layering and associated sites, underwater exploration and photography of submerged sites and artifacts, and

the utilization of imaging from aircraft and spacecraft to reveal the regional setting of archaeological sites and to assist in cultural resource management Geological Prior Information Andrew Curtis, Rachel Wood, 2004 Geological prior information represents a new and emerging field within the geosciences Prior information is the term used to describe previously existing knowledge that can be brought to bear on a new problem This volume describes a range of methods that can be used to find solutions to practical and theoretical problems using geological prior information and the nature of geological information that can be so employed **Remote Sensing in Archaeology** Jay K. Johnson, 2006-03-19 One CD ROM disc in pocket Remote Sensing and Urban Analysis Jean-Paul Donnay, Mike J. Barnsley, Paul A. Longley, 2003-09-02 One of the key geographical developments over the last two centuries has been that of urbanisation In recent years this has exploded globally particularly in developing countries It is essential for governments planners and researchers in geography and allied fields to understand this process and the main way of being able to do this is to accurately map these changes The main method of this mapping is Remote Sensing This up to date analysis of the area looks at a wide range of methodologies currently being used to produce and analyse remotely sensed data of urban areas The authors examine the various techniques used to extract information from digital multispectral images of urban areas Donnay and Barnsley then go on to look at the identification of urban forms the delineation of agglomerations and the development of urban morphology considering the analysis of integrated data sets and surface models and going on to look at the estimation of human population levels Global Land Ice Measurements from Space Jeffrey S.
