Rhizomicrobiome in Sustainable Agriculture and Environment Joginder Singh Panwar, Vikas Sharma, 2024-10-18 Rhizomicrobiome Current Status and Future Prospects for Agriculture and Environment explores the important potential of biocontrol agents in the reduction of overexploitation of synthetic pesticides enhancing crop production and maintaining the natural texture and health of agricultural soils As concerns about sustainable production challenge current practices this book presents opportunities for utilizing biological systems as part of the solution Rhizomicrobiome is a significant part of plant biological system which impacts the plant growth and survival in different physiological conditions Its composition includes different microbial networks whose presence is mainly impacted by the root exudates Archaea bacteria protozoa fungi oomycetes nematodes microarthropods etc are the significant parts of the rhizomicrobiome Rhizomicrobiome could be that novel ecosystem housing the bioinoculants that can help create sustainable productive growth environments Written by a team of global experts Rhizomicrobiome explores the full range of rhizomicrobiome topics including sustainable agriculture food security and environmental management and will be a valuable resource for researchers academics and advanced students Introduces the latest advancement in the sustainable agricultural practices microbial biocontrol and environmental management Presents the prospects of wide applications of traditional uses of and modern practices of harnessing the potential of rhizomicrobiome Includes informative illustrations of recent trends of phyto and soil microbiome

The Handbook of Mites of Economic Plants Vincenzo Vacante, 2015-12-21 Mites pose a serious problem to plants worldwide attacking crops and spreading disease When mites damage crops of economic importance the impacts can be felt globally Mites are among the most diverse and successful of invertebrates with over 45 000 described species with many more thousands to be discovered They are responsible for a significant portion of the losses of crops for food fibre industry and other purposes and require expensive and often controversial pest control measures Understanding these mites is vital for entomologists pest researchers agronomists and food producers Knowledge of mite pests helps to inform control strategies and optimize the production of economic plants and the agrarian economy This encyclopedia provides a thorough coverage of the mites and the problems they cause to crops yet it is easily searchable organised by mite species and subdivided into helpful headings It takes a worldwide view of the issue of mites injurious to economic plants describing mites prevalent in different regions and discussing control methods appropriate in different

environments This book provides an encyclopaedic reference to the major mites described by family in terms of their internal and external morphology bio ecology and family systematics Methods of mite collection and laboratory study is described as well as species diagnostic characteristics worldwide distribution host plants identification by the type of damage they cause and control strategies including chemical and biological intervention and integrated pest management measures Mites of the following families are included Eriophyoidea Tarsonemidae Tuckerellidae Tenuipalpidae Tetranychidae Acaridae Penthaleidae Mites of Economic Plants is an important resource for students of entomology and crop production and as a thorough reference guide for researchers and field workers involved with mites crop damage and food production **Plant**

Eriophyoid Mites (Acari: Prostigmata) from Brazil Denise Návia,Mercia Elias Duarte,Carlos H. W. Flechtmann,2021 Abstract The superfamily Eriophyoidea constitute a group of phytophagous mites of particular economic and evolutionary interest due to their intimate association with host plants and their agricultural importance as harmful or beneficial organisms Studies on the Eriophyoidea fauna in Brazil started in the early 1900s with botanical works on cecidias and were continued with researchers looking for and reporting on eriophyid mites causing damage to agricultural crops Therefore in this annotated checklist we compile information from just over a century on eriophyid mites reported or described from Brazil Its purpose is to facilitate plant protection strategies and guide future work on this important group of phytophagous mites In addition to taxonomy we present information on host plants and general aspects of cecidia attributed to eriophyoid mites but without genus species identification Compilation was based on i literature including papers books theses and congress symposium publications ii specimens deposited in mite collections in Brazil On each species we present i suprageneric generic classification synonyms and previous genus era assignments including references on original and or additional descriptions ii type host plant and other host s plant s found in the country iii host relationships and remarks on symptoms iv localities of occurrences at States Federal District and municipal levels and v host plant status in Brazil as well as biomes where they occur or are cultivated A total of 234 valid eriophyoid mite species are recorded 196 Eriophyidae 20 Diptilomiopidae and 18 Phytoptidae distributed in 92 genera Host plants comprised 233

species belonging to 141 genera and 56 plant families Four new reports of eriophyoid mites in Brazil are presented based on specimens deposited in reference collections A new combination is presented for *Propeaciota secundum* Flechtmann Amrine Stasny in the genus *Khanthongella* In addition data on observations and descriptions of 67 cecidias attributed to eriophyoid mites in five states and on 21 plant families are presented Geographically the distribution of species reports of eriophyoids around Brazil is highly uneven with more than 64% of species 151 spp in the Southeast region which surely reflects a lack of research elsewhere Regarding host plant specificity 77 7% are reported on only one host species 88 9% on one host genus and 98 3% on one host family Regarding host status 64 1% of species are exclusively associated with native host plants 27% with naturalized or exotic cultivated host plants and 6 4% from both native and naturalized or exotic host plants Keywords Eriophyoidea phytophagous mites Neotropical South America host plants Pages 4 5
