**The Engineer's Error Coding Handbook** A. Houghton, 2012-12-06 Error coding is a fascinating subject as much if not more so as it is an indispensable part of modern engineering systems Unfortunately in a bid to remain general and to create a solid foundation upon which to build many books on this subject are out of the reach of those with more engineering based or non mathematical backgrounds This is a pity because in many cases the maths is tractable with few and simple rules If we are content to believe that it works and let others worry about the deeper mysteries of how or why then with a little practice the design and implementation of practical error coding systems becomes straightforward In this text I have attempted to reveal the useful kernel of the subject removing the shell of terms and proofs that usually surrounds it Being somewhat empirical in nature an empiricist and occasionally heard to quote the adage if it works twice it s a law my explanations take this form For many including myself abstract ideas are often better grasped by practical illustration than from yards of theory

*Error Correcting Codes* D J. Baylis, 1997-12-04 Assuming little previous mathematical knowledge *Error Correcting Codes* provides a sound introduction to key areas of the subject Topics have been chosen for their importance and practical significance which Baylis demonstrates in a rigorous but gentle mathematical style Coverage includes optimal codes linear and non linear codes general techniques of decoding errors and erasures error detection syndrome decoding and much more *Error Correcting Codes* contains not only straight maths but also exercises on more investigational problem solving Chapters on number theory and polynomial algebra are included to support linear codes and cyclic codes and an extensive reminder of relevant topics in linear algebra is given Exercises are placed within the main body of the text to encourage active participation by the reader with comprehensive solutions provided *Error Correcting Codes* will appeal to undergraduate students in pure and applied mathematical fields software engineering communications engineering computer science and information technology and to organizations with substantial research and development in those areas
