### 3.3 Source of Errors in Chest Film Interpretation

There are many sources of error in the radiographic diagnosis of lung cancer: image quality, lesion detection, lesion recognition, and communication of the radiological findings to the referring physician [18]. Lesion size is an important factor influencing detectability on chest radiographs; according to some reports, only 50% of 1-cm lesions are detected [19]. Lesion shape may also influence detectability, as sharply margined lesions are found more easily than spiculated or poorly defined cancers.

In addition, technical features play an important role in the failure to diagnose lung cancer [19]. On chest radiography, film contrast, density, and kVP
