China's e-Science Blue Book 2020 has been jointly compiled by the Chinese Academy of Sciences Cyberspace Administration of China Ministry of Education of the PRC Ministry of Science and Technology of the PRC China Association for Science and Technology Chinese Academy of Social Sciences National Natural Science Foundation of China and the Chinese Academy of Agricultural Sciences It was focusing on the new situation new progress and new achievements of China's e-Science in the past two years During the 13th Five Year Plan period Chinese scholars make full use of advanced information technology to carry out scientific research work and have achieved a series of major scientific and technological achievements This book has collected 28 research reports about China's e-Science application in the past two years to introduce the application in the frontier research of science and technology the progress of e-Science in major projects and the achievements of informatization in interdisciplinary As such it provides a valuable reference resource for researchers and students in this area and promotes further e-Science research

E-science i Tm (science and Technology)' 2003 Ed. , Workflows for e-Science Ian J. Taylor, Ewa Deelman, Dennis B. Gannon, Matthew Shields, 2007-12-31 This collection of articles on Workflows for e-Science is very timely and important Increasingly to attack the next generation of scientific problems multidisciplinary and distributed teams of scientists need to collaborate to make progress on these new Grand Challenges Scientists now need to access and exploit computational resources and databases that are geographically distributed through the use of high speed networks Virtual Organizations or VOs must be established that span multiple administrative domains and or institutions and which can provide appropriate authentication and authorization services and access controls to collaborating members Some of these VOs may only have a fleeting existence but the lifetime of others may run into many years The Grid community is attempting to develop both standards and middleware to enable both scientists and industry to build such VOs routinely and robustly This of course has been the goal of research in distributed computing for many years but now these technologies come with a new twist service orientation By specifying resources in terms of a service description rather than allowing direct access to the resources the IT industry believes that such an approach results in the construction of more robust distributed systems The industry has therefore united around web services as the standard technology to implement such service oriented architectures and to ensure interoperability between different vendor systems

New Infrastructures for Knowledge Production Christine Hine,2006-01-01 This book is offers an overview of the practices and the technologies that are shaping the knowledge production of the future Provided by publisher *China's e-Science Blue Book 2023* Chinese Academy of Sciences,Ministry of Education of the PRC,Ministry of Science and Technology PRC,China Association for Science Technology,Chinese Academy of Social Sciences,Chinese Academy of Engineering,National Natural Science FoundationChina,Chinese Academy of Agricultural Sciences,2024-03-23 This series of books is a result of collaboration between the Chinese Academy of Sciences and relevant national departments This book provides a comprehensive summary and analysis of the current state and future trends of e Science in China with a focus on strategic developments application practices and infrastructure construction This book showcases the recent progress achievements and new situations in China s e Science in the past two years and offer detailed cases for reference The content is rich and offers valuable insights for the future development of research informatization *Automated Optimization Methods for Scientific Workflows in e-Science Infrastructures* Sonja Holl,2014 Scientific workflows have emerged as a key technology that assists scientists with the design management execution sharing and reuse of in silico experiments Workflow management systems simplify the management of scientific workflows by providing graphical interfaces for their development monitoring and analysis Nowadays e Science combines such workflow management systems with large scale data and computing resources into complex research infrastructures For instance e Science allows the conveyance of best practice research in collaborations by providing workflow repositories which facilitate the sharing and

reuse of scientific workflows However scientists are still faced with different limitations while reusing workflows One of the most common challenges they meet is the need to select appropriate applications and their individual execution parameters If scientists do not want to rely on default or experience based parameters the best effort option is to test different workflow set ups using either trial and error approaches or parameter sweeps Both methods may be inefficient or time consuming respectively especially when tuning a large number of parameters Therefore scientists require an effective and efficient mechanism that automatically tests different workflow set ups in an intelligent way and will help them to improve their scientific results This thesis addresses the limitation described above by defining and implementing an approach for the optimization of scientific workflows In the course of this work scientists needs are investigated and requirements are formulated resulting in an appropriate optimization concept In a following step this concept is prototypically implemented by extending a workflow management system with an optimization framework including general mechanisms required to conduct workflow optimization As optimization is an ongoing research topic different algorithms are provided by pluggable extensions plugins that can be loosely coupled with the framework resulting in a generic and quickly extendable system In this thesis an exemplary plugin is introduced which applies a Genetic Algorithm for parameter optimization In order to accelerate and therefore make workflow optimization feasible at all e Science infrastructures are utilized for the parallel execution of scientific workflows This is empowered by additional extensions enabling the execution of applications and workflows on distributed computing resources The actual implementation and therewith the general approach of workflow optimization is experimentally verified by four use cases in the life science domain All workflows were significantly improved which demonstrates the advantage of the proposed workflow optimization Finally a new collaboration based approach is introduced that harnesses optimization provenance to make optimization faster and more robust in the future **Future**
