Novel Biomarkers for Heart Disease Michael Lichtenauer, 2020-12-28 Cardiac biomarkers such as troponins and natriuretic peptides have made a great impact on clinical decision making as well as improving our understanding of molecular mechanisms of different disease conditions However

the biomarkers that are currently in use do not reflect all the multiple disease pathways that are involved in a broad spectrum of cardiac disease conditions ranging from acute coronary syndrome to heart failure and heart failure with preserved ejection fraction HFpEF to pulmonary hypertension or arrhythmias In this Special Issue we will provide an overview of the current developments in the field of biomarker research beginning with research on molecular pathways and cellular communication e g microRNA up to the clinical use of biomarkers American Journal of Veterinary Research ,2007

Magnetic Resonance Imaging Xiaoyue Zhou,Rob J. Van Der Geest,Yucheng Chen,Peng Hu, Ming Yen Ng,2024-08-28 In the past decades advanced quantitative indexes obtained by cardiovascular magnetic resonance imaging CMRI such as myocardial strain myocardial T1 ECV T2 T2 relaxation value myocardial blood flow quantification index and hemodynamics indexes have been proposed as an alternative for non invasive quantitative evaluation in various cardiovascular diseases Those quantitative indexes have been proven to be more sensitive in assessing the early change of myocardial tissue ventricular function or hemodynamics compared to the conventional qualitative methods However there are many challenges in the accurate measurement of those indexes as well as the evaluation of their clinical significance in the diagnosis and prognosis of a certain disease Besides quality control and standardization of those indexes become crucial when promoting them into clinical practice This Research Topic will offer comprehensive reviews and original research articles of the newly emerged quantitative CMRI methods and the clinical insights of the diagnostic and prognostic value of those advanced CMRI indexes CMRI techniques such as myocardial strain analysis quantitative myocardial tissue mapping 2 dimensional 4 dimensional flow quantification and quantitative perfusion will be of our interest The aim of this Research Topic will be to highlight the promising technical improvements in the accurate measurement of the CMRI indexes and or the added value of those indexes in disease diagnosis and prognosis Meanwhile quality control and standardization of the advanced CMRI indexes in multi centre multi vendor research projects will be discussed **Added Value of 3D Imaging in the Diagnosis**

and Prognostication of Patients with Right Ventricular Dysfunction Attila Kovacs,2024-01-24 Right ventricular RV function has proven to be a prognostic factor in heart failure with reduced and preserved left ventricular ejection fraction or in pulmonary arterial hypertension RV function is also a cornerstone in managing relatively novel clinical issues such as mechanical circulatory support devices or grown up congenital heart diseases Despite the notable amount of

circumferentially oriented myofibers in the subepicardial layer of the RV myocardium the non longitudinal motion directions are often neglected in the everyday assessment of RV function The complex RV contraction pattern however incorporates distinct mechanical components 3D imaging may enable capturing subtle RV dysfunction which can be undetectable by conventional methods Novel 3D based parameters may allow an earlier diagnosis and better risk stratification of numerous cardiac and primarily non cardiac diseases
