

Separator MSE 230-01-777

Technical Data | Milk and whey skimming, cream concentration, serum skimming

This separator has been designed for hot milk or whey skimming, cream concentration or serum skimming.

The self-cleaning bowl makes the machine suitable for fully automatic cleaning-in-place. Opening and closing of the bowl for discharging the solids takes place hydraulically using water. The optionally available Westfalia Separator® geoplus system enables an extension of the ejection intervals and consequently a reduction of the solids discharge. The product is fed into the machine through a closed-line system.

Double centrifugal pumps likewise discharge the heavy and light phases in a closed system. The product feed and discharges in the bowl are hydrothermically sealed and do not feature mechanical seals. The product connections can be designed according to DIN 11851 or ISO 2852 (TriClamp).

The optional Westfalia Separator® vewatch® system permits permanent monitoring of bearing condition and smooth rotation as a basis for targeted preventive maintenance.

The cast iron frame and the motor of the machine are completely clad with stainless steel. All product-contacting parts are made of stainless steel. FDA approved materials are available for the seals. The hygienic design of the separator is certified by 3-A sanitary standards.
