 Settings Richard Wootton,2015-04-24 Telemedicine networks to support healthcare workers in resource limited settings  
 often for humanitarian purposes have evolved over the last decade or so in a largely autonomous way Communication  
 between them has been informal and relatively limited in scope This situation could be improved by developing a  
 comprehensive approach to the collection and dissemination of information A recent review identified seven telemedicine  
 networks each of which had been in operation for at least five years and which provided store and forward telemedicine  
 services to doctors in low and middle income countries These networks provide clinically useful services and improved  
 healthcare access However like much of telemedicine the formal evidence for their cost effectiveness remains weak Topics of  
 current research interest therefore include the cost effectiveness of telemedicine in resource limited settings Outcomes data  
 and methods for gathering it such as patient quality of life following a telemedicine episode the knowledge gain of healthcare  
 staff involved in telemedicine and staff recruitment and retention in rural areas are also of interest Finally there is little  
 published information about the performance of these telemedicine networks and methods for measuring it about how best to  
 manage them and about how to share resources between them A collection of articles reporting the current evidence  
 supporting the use of telemedicine in resource limited settings would build the evidence base and should provide a focus for  
 future research It would also serve to raise the profile of this potentially important research field Contrast Harmonic
