**Economics** John E. Wagner, 2023-12-22 Forestry Economics introduces students and practitioners to the economics of managing forests and forest enterprises The book adopts the approach of managerial economics textbooks and applies this to the unique problems and production processes faced by managers of forests and forest enterprises What many future forest and natural resource managers need is to understand what economic information is and how to use it to make better business and management decisions John E Wagner draws on his 30 years of experience teaching and working in the field of forest resource economics to present students with an accessible understanding of the unique production processes and problems faced by forest and other natural resource managers The second edition has been updated to include Expanded discussion of compounding discounting and capital budgeting as well as an expanded discussion of when to replace a capital asset that has i costs but no direct revenue stream such as a machine ii costs and a direct annual revenue stream such as a solar array or iii costs and a periodic revenue stream illustrated by the forest rotation problem New practical examples to provide students with applications of the concepts being discussed in the text most notably on New Zealand and a Radiata Pine Pinus radiata Plantation A brand new chapter that develops business plans for for profit businesses to illustrate how a business plan is derived from the economic information contained within the Architectural Plan for Profit and how it can be used to make business decisions about continuing to operate a business or to start a new business This textbook is an invaluable source of clear and accessible information on forestry economics and management not only for economics students but also for students of other disciplines and those already working in forestry and natural resources

**Yellowstone's Destabilized Ecosystem** Frederic H. Wagner, 2006-05-25 Wagner one of our most distinguished wildlife biologists is a strong critic of ecological practices in the national parks This book provides an assessment of the ecological history of Yellowstone s northern range since before the park existed showing the impact of US Park Service policies on the health of the areas they oversee He demonstrates that elk had been historically rare throughout the region and that overgrazing by elk has seriously degraded the landscape and altered the structure of the area This is a major contribution to reconstructing the ecology of this region over the course of the past 500 years It is also a critique of US Park Service management policies and their stewardship of the nation s most cherished natural areas Wagner s book will generate substantial attention and debate both in the scientific and policy management communities Seed Dispersal by Ants in a Deciduous Forest Ecosystem Elena Gorb, Stanislav Gorb, 2003-08-31 Countless ants transport and deposit seeds and thereby influence the survival death and evolution of many plant species In higher plants seed dispersal by ants myrmecochory has appeared many times independently in different lineages More than 3000 plant species are known to utilize ant assistance to be planted Myrmecochory is a very interesting and rather enigmatic form of mutualistic ant plant associations This phenomenon is extremely complex because there are hundreds of ant species connected with hundreds of plant species This book effectively combines a thorough approach to investigating morphological and physiological adaptations of plants with

elegant field experiments on the behaviour of ants This monograph is a first attempt at collecting information about morphology ecology and phenology of ants and plants from one ecosystem The book gives readers a panoramic view of the hidden poorly known interrelations not only between pairs of ants and plant species but also between species communities in the ecosystem The authors have considered not just one aspect of animal plant relationships but have tried to show them in all their complexity Some aspects of the ant plant interactions described in the book may be of interest to botanists others to zoologists or ecologists but the entire work is an excellent example of the marriage of these biological disciplines Forest Landscape Analysis and Design Nancy M. Diaz,1992 **Urban Ecosystem Ecology** J. Aitkenhead-Peterson,2020-01-22 If more than half of the Earth s people live in cities and the amount of paved surfaces in the United States is equivalent to the area of Ohio shouldn t our sciences thrive in the city Urban Ecosystem Ecology takes on the important task of reconciling environmental sciences with the world s growing urbanization From wildlife to water from urban agriculture to low impact development we need a better understanding of the urban ecosystem *Ecosystem Dynamics of the Boreal Forest : The Kluane Project* Vancouver Charles J. Krebs Professor of Zoology University of British Columbia,Edmonton Stan Boutin Professor of Zoology University of Alberta,Rudy Boonstra Professor of Physiology and Zoology University of Toronto,2001-03-31 The boreal forest is one of the world s great ecosystems stretching across North America and Eurasia in an unbroken band and containing about 25% of the world s closed canopy forests The Kluane Boreal Forest Ecosystem Project was a 10 year study by nine of Canada s leading ecologists to unravel the impact of the snowshoe hare cycle on the plants and the other vertebrate species in the boreal forest In much of the boreal forest the snowshoe hare acts as a keystone herbivore fluctuating in 9 10 year cycles and dragging along secondary cycles in predators such as lynx and great horned owls By manipulating the ecosystem on a large scale from the bottom via fertilizer additions and from the top by predator exclosures they have traced the plant herbivore relationships and the predator prey relationships in this ecosystem to try to answer the question of what drives small mammal population cycles This study is unique in being large scale and experimental on a relatively simple ecosystem with the overall goal of defining what determines community structure in the boreal forest *Ecosystem Dynamics of the Boreal Forest The Kluane Project* summarizes these findings weaving new discoveries of the role of herbivores turned predators compensatory plant growth and predators eating predators with an ecological story rich in details and clear in its findings of a community where predation plays a key role in determining the fate of individuals and populations The study of the Kluane boreal forest raises key questions about the scale of conservation required for boreal forest communities and the many mammals and birds that live there *Bibliography of Agriculture* ,1975 *Nutrient Uptake and Cycling in Forest Ecosystems* L.O. Nilsson,Reinhard F. Hüttel,U.T. Johansson,2012-12-06 From the research results and discussions presented in this book it becomes clear that a profound understanding of the various interrelationships of the nutritional aspects allows the implementation of specific management strategies to improve stability

and productivity of forest ecosystems In particular the effects of environmental changes as related to the impacts of air pollution global change and land use on nutrient uptake and cycling processes in forest ecosystems are dealt with in detail The book is divided into six main issues and each topic contains reviews as well as selected results of recent studies *The Man Who Planted Trees* Jim Robbins,2015-03-03 The Man Who Planted Trees is the inspiring story of David Milarch s quest to clone the biggest trees on the planet in order to save our forests and ecosystem as well as a hopeful lesson about how each of us has the ability to make a difference When is the best time to plant a tree Twenty years ago The second best time Today Chinese proverb Twenty years ago David Milarch a northern Michigan nurseryman with a penchant for hard living had a vision angels came to tell him that the earth was in trouble Its trees were dying and without them human life was in jeopardy The solution they told him was to clone the champion trees of the world the largest the hardiest the ones that had survived millennia and were most resilient to climate change and create a kind of Noah s ark of tree genetics Without knowing if the message had any basis in science or why he d been chosen for this task Milarch began his mission of cloning the world s great trees Many scientists and tree experts told him it couldn t be done but twenty years later his team has successfully cloned some of the world s oldest trees among them giant redwoods and sequoias They have also grown seedlings from the oldest tree in the world the bristlecone pine Methuselah When New York Times journalist Jim Robbins came upon Milarch s story he was fascinated but had his doubts Yet over several years listening to Milarch and talking to scientists he came to realize that there is so much we do not yet know about trees how they die how they communicate the myriad crucial ways they filter water and air and otherwise support life on Earth It became clear that as the planet changes trees and forest are essential to assuring its survival Praise for *The Man Who Planted Trees* This is a story of miracles and obsession and love and survival Told with Jim Robbins s signature clarity and eye for telling detail *The Man Who Planted Trees* is also the most hopeful book I ve read in years I kept thinking of the end of Saint Francis s wonderful prayer And may God bless you with enough foolishness to believe that you can make a difference in the world so that you can do what others claim cannot be done Alexandra Fuller author of *Don t Let s Go to the Dogs Tonight* Absorbing eloquent and loving While Robbins s tone is urgent it doesn t compromise his crystal clear science Even the smallest details here are fascinating Dominique Browning The New York Times Book Review The great poet W S Merwin once wrote On the last day of the world I would want to plant a tree It s good to see in this lovely volume that some folks are getting a head start Bill McKibben author of *Eaarth Making a Life on a Tough New Planet* Inspiring Robbins lucidly summarizes the importance and value of trees to planet Earth and all humanity The Ecologist Imagine a world without trees writes journalist Jim Robbins It s nearly impossible after reading *The Man Who Planted Trees* in which Robbins weaves science and spirituality as he explores the bounty these plants offer the planet Audubon [Tropical Dry Forests in the Americas](#) Arturo Sanchez-Azofeifa,Jennifer S.
