Perspectives on the Future of Software Engineering Jürgen Münch, Klaus Schmid, 2013-06-13 The dependence on quality software in all areas of life is what makes software engineering a key discipline for today's society Thus over the last few decades it has been increasingly recognized that it is particularly important to demonstrate the value of software engineering methods in real world environments a task which is the focus of empirical software engineering One of the leading protagonists of this discipline worldwide is Prof Dr h c Dieter Rombach who dedicated his entire career to empirical software engineering For his many important contributions to the field he has received numerous awards and recognitions including the U S National Science Foundation's Presidential Young Investigator Award and the Cross of the Order of Merit of the Federal Republic of Germany He is a Fellow of both the ACM and the IEEE Computer Society This book published in honor of his 60th birthday is dedicated to Dieter Rombach and his contributions to software engineering in general as well as to empirical software engineering in particular This book presents invited contributions from a number of the most internationally renowned software engineering researchers like Victor Basili Barry Boehm Manfred Broy Carlo Ghezzi Michael Jackson Leon Osterweil and of course by Dieter Rombach himself Several key experts from the Fraunhofer IESE the institute founded and led by Dieter Rombach also contributed to the book The contributions summarize some of the most important trends in software engineering today and outline a vision for the future of the field The book is structured into three main parts The first part focuses on the classical foundations of software engineering such as notations architecture and processes while the second addresses empirical software engineering in particular as the core field of Dieter Rombach's contributions Finally the third part discusses a broad vision for the future of software engineering

Foundations of Reinforcement Learning with Applications in Finance Ashwin Rao, Tikhon Jelvis, 2022-12-16 Foundations of Reinforcement Learning with Applications in Finance aims to demystify Reinforcement Learning and to make it a practically useful tool for those studying and working in applied areas especially finance Reinforcement Learning is emerging as a powerful technique for solving a variety of complex problems across industries that involve Sequential Optimal Decisioning under Uncertainty Its penetration in high profile problems like self driving cars robotics and strategy games points to a future where Reinforcement Learning algorithms will have decisioning abilities far superior to humans But when it comes getting educated in this area there seems to be a reluctance to jump right in because Reinforcement Learning appears to have acquired a reputation for being mysterious and technically challenging This book strives to impart a lucid and insightful understanding of the topic by emphasizing the foundational mathematics and implementing models and algorithms in well designed Python code along with robust coverage

of several financial trading problems that can be solved with Reinforcement Learning This book has been created after years of iterative experimentation on the pedagogy of these topics while being taught to university students as well as industry practitioners Features Focus on the foundational theory underpinning Reinforcement Learning and software design of the corresponding models and algorithms Suitable as a primary text for courses in Reinforcement Learning but also as supplementary reading for applied financial mathematics programming and other related courses Suitable for a professional audience of quantitative analysts or data scientists Blends theory mathematics programming algorithms and real world financial nuances while always striving to maintain simplicity and to build intuitive understanding To access the code base for this book please go to https://github.com/TikhonJelvis/RL_book **Frontiers in Software Engineering Education** Jean-Michel Bruel, Alfredo Capozucca, Manuel Mazzara, Bertrand Meyer, Alexandr Naumchev, Andrey Sadovykh, 2020-08-11 This book constitutes invited papers from the First International Workshop on Frontiers in Software Engineering Education FISEE 2019 which took place during November 11-13 2019 at the Chateau de Villebrumier France The 25 papers included in this volume were considerably enhanced after the conference and during two different peer review phases The contributions cover a wide range of problems in teaching software engineering and are organized in the following sections Course experience lessons learnt curriculum and course design competitions and workshops empirical studies tools and automation globalization of education and learning by doing The final part TOOLS Workshop Artificial and Natural Tools ANT contains submissions presented at a different but related workshop run at Innopolis University Russia in the context of the TOOLS 2019 conference FISEE 2019 is part of a series of scientific events held at the new LASER center in Villebrumier near Montauban and Toulouse France **Mathematical Structures for Software Engineering** Bernard De Neumann, Dan Simpson, Gil Slater, 1991 This volume is concerned with the application of formal mathematical methods in software engineering As the design writing and testing of software becomes a major sector of economic activity the need for rigorous techniques has also grown The papers in this book are devoted to various mathematical structures which find use in aspects of software design and they cover topics such as the formal specification of systems the design of communications software and concurrent processing All the contributors are experts in their respective fields As a result this collection provides a timely survey of this rapidly growing area Software engineers and computer scientists will find this work to be an invaluable reference source Mathematicians will appreciate the discussions of the contribution that their discipline can make and the interesting challenges for the future **Formal Methods and Software Engineering** Kazuhiro Ogata, Mark Lawford, Shaoying Liu, 2016-10-31 This book constitutes the refereed proceedings of the 18th International Conference on Formal Engineering Methods ICFEM 2016 held in Tokyo Japan in November 2016 The 27 revised full papers presented together with three invited talks were carefully reviewed and selected from 64 submissions The conference focuses in all areas related to formal engineering methods such as verification and validation software engineering formal specification

and modeling software security and software reliability Soft Computing in Software Engineering Ernesto Damiani, Mauro Madravia, 2012-12-06 Soft computing is playing an increasing role in the study of complex systems in science and engineering There is a large spectrum of successful applications of soft computing in very different applications domains such as aerospace communication consumer appliances electric power systems process engineering transportation and manufacturing automation and robotics It has taken a while to bring the early ideas of soft computing to an area and a discipline that seems to be more than appropriate for that Here it is This book studies SOFT computing in SOFTWARE engineering environment The book is HARD in terms of its results It covers a range of core topics from software engineering that are soft from its very nature selection of components software design software reuse software cost estimation and software processes Soft computing differs from conventional hard computing in its ability to be tolerant of imprecision uncertainty partial truth and approximation The guiding principle of soft computing is Exploit the tolerance for imprecision uncertainty partial truth and approximation to achieve tractability robustness and low solution cost The role model for soft computing is the human mind This seems to be a natural fit with software engineering a human based development activity based on sound engineering principles A recent survey by researchers reveals that Software Engineering research tends to be quite self contained not relying on other disciplines for its thinking **The Science of Functional Programming (draft version)** Sergei Winitzki, *Formal Methods and Software Engineering* Chris George, Huaikou Miao, 2003-06-30 This book constitutes the refereed proceedings of the 4th International Conference on Formal Engineering methods ICFEM 2002 held in Shanghai China in October 2002 The 43 revised full papers and 16 revised short papers presented together with 5 invited contributions were carefully reviewed and selected from a total of 108 submissions The papers are organized in topical sections on component engineering and software architecture method integration specification techniques and languages tools and environments refinement applications validation and verification UML and semantics **From Software Engineering to Formal Methods and Tools, and Back** Maurice H. ter Beek, Alessandro Fantechi, Laura Semini, 2019-10-08 This volume was published in honor of Stefania Gnesi's 65th birthday The Festschrift volume contains 32 papers written by close collaborators and friends of Stefania and was presented to her on October 8 2019 one day colloquium held in Porto Portugal The Festschrift consists of eight sections seven of which reflect the main research areas to which Stefania has contributed Following a survey of Stefania's legacy in research and a homage by her thesis supervisor these seven sections are ordered according to Stefania's life cycle in research from software engineering to formal methods and tools and back Software Engineering Formal Methods and Tools Requirements Engineering Natural Language Processing Software Product Lines Formal Verification and Applications Formal Development of a Network-Centric RTOS Eric Verhulst, Raymond T. Boute, José Miguel Sampaio Faria, Bernhard H.C. Sputh, Vitaliy Mezhyuev, 2011-08-23 Many systems devices and appliances used routinely in everyday life ranging from cell phones to cars contain significant amounts of

software that is not directly visible to the user and is therefore called embedded. For coordinating the various software components and allowing them to communicate with each other, support software is needed, called an operating system (OS). Because embedded software must function in real time (RT), a Real Time Operating System (RTOS) is needed. This book describes a formally developed network-centric Real Time Operating System, OpenComRTOS. One of the first in its kind, OpenComRTOS was originally developed to verify the usefulness of formal methods in the context of embedded software engineering. Using the formal methods described in this book produces results that are more reliable while delivering higher performance. The result is a unique real-time concurrent programming system that supports heterogeneous systems with just 5 Kbytes/node. It is compatible with safety-related engineering standards such as IEC61508. Software Engineering and Formal Methods Carlos Canal, Akram Idani, 2015-01-31. This book constitutes revised selected papers from the workshops collocated with the SEFM 2014 conference on Software Engineering and Formal Methods held in Grenoble, France, in September 2014. The 26 papers included in this volume were carefully reviewed and selected from 49 submissions. They are from the following workshops: the 1st Workshop on Human-Oriented Formal Methods, From Readability to Automation (HOFM) 2014; the 3rd International Symposium on Modelling and Knowledge Management Applications, Systems and Domains (MoKMaSD) 2014; the 8th International Workshop on Foundations and Techniques for Open Source Software Certification (Open Cert) 2014; the 1st Workshop on Safety and Formal Methods (SaFoMe) 2014; and the 4th Workshop on Formal Methods in the Development of Software (WS-FMDS) 2014. Formal Techniques in Real-Time and Fault-Tolerant Systems Anders P. Ravn, Hans Rischel, 1998-09-02. This book constitutes the refereed proceedings of the 5th International Symposium on Formal Techniques in Real Time and Fault Tolerant Systems (FTRTFT 98) held in Lyngby, Denmark, in September 1998. The 22 revised full papers presented were carefully selected and reviewed for inclusion in the book. Also included are four invited contributions and five tool demonstrations. The papers address the current aspects of the hot topic of embedded systems, in particular temporal logic requirements engineering, analysis techniques, verification, model checking, and applications. *Prospects for Hardware Foundations* Bernhard Möller, John V.
