Life As No One Knows It Sara Imari Walker, 2025-08-12 What is life This is among the most difficult open problems in science right up there with the nature of consciousness and the existence of matter All the definitions we have fall short Physicist and astrobiologist Sara Imari Walker argues that solving the origin of life requires radical new thinking and an experimentally testable theory for what life is She proposes a new paradigm for understanding what physics encompasses and what we recognize as life inviting us into a world of maverick scientists working without a map seeking not just answers but better ways to formulate the biggest questions we have about the universe Rigorous accessible and vital *Life As No One Knows It* celebrates the mystery of life and the explanatory power of physics A fresh take on the age old questions Are we alone and Where did we come from American Scientist A virtuosos intellectual performance full of wit mischief and bursts of insolent brevity Simon Ings Daily Telegraph Provocative and intriguing Wall Street Journal **The Way Life Works** Mahlon B. Hoagland, Bert Dodson, 1998 In the tradition of David Macaulay s *The Way Things Work* this popular science book a unique collaboration between a world renowned molecular biologist and an equally talented artist explains how life grows develops reproduces and gets by Full color From the Hardcover edition **The Vital Question** Nick Lane, 2015 Why is life the way it is Bacteria evolved into complex life just once in four billion years of life on earth and all complex life shares many strange properties from sex to ageing and death If life evolved on other planets would it be the same or completely different In *The Vital Question* Nick Lane radically reframes evolutionary history putting forward a cogent solution to conundrums that have troubled scientists for decades The answer he argues lies in energy how all life on Earth lives off a voltage with the strength of a bolt of lightning In unravelling these scientific enigmas making sense of life s quirks Lane s explanation provides a solution to life s vital questions why are we as we are and why are we here at all This is ground breaking science in an accessible form in the tradition of Charles Darwin s *The Origin of Species* Richard Dawkins *The Selfish Gene* and Jared

Diamond s Guns Germs and Steel **What is Life? The Physical Aspect of the Living Cell** Erwin Schrödinger,1945

Life's Edge: The Search for What It Means to Be Alive Carl Zimmer,2022-09-13 This book is not just about life but about discovery itself It is about error and hubris but also about wonder and the reach of science And it is bookended with the ultimate question How do we define the thing that defines us Siddhartha Mukherjee author of The Gene We all assume we know what life is but the more scientists learn about the living world from protocells to brains from zygotes to pandemic viruses the harder they find it is to locate the edges of life where it begins and ends What exactly does it mean to be alive Is a virus alive Is a foetus Carl Zimmer investigates one of the biggest questions of all What is life The answer seems obvious until you try to seriously answer it Is the apple sitting on your kitchen counter alive or is only the apple tree it came from deserving of the word If we can t answer that question here on earth how will we know when and if we discover alien life on other worlds The question hangs over some of society s most charged conflicts whether a fertilized egg is a living person for example and when we ought to declare a person legally dead Life s Edge is an utterly fascinating investigation by one of the most celebrated science writers of our time Zimmer journeys through the strange experiments that have attempted to recreate life Literally hundreds of definitions of what that should look like now exist but none has yet emerged as an obvious winner Lists of what living things have in common do not add up to a theory of life It s never clear why some items on the list are essential and others not Coronaviruses have altered the course of history and yet many scientists maintain they are not alive Chemists are creating droplets that can swarm sense their environment and multiply Have they made life in the lab Whether he is handling pythons in Alabama or searching for hibernating bats in the Adirondacks Zimmer revels in astounding examples of life at its most bizarre He tries his own hand at evolving life in a test tube with unnerving results Charting the obsession with Dr Frankenstein s monster and how Coleridge came to believe the whole universe was alive Zimmer leads us all the way into the labs and minds of researchers working on engineering life from the ground up *What Is Life?* Ed Regis,2008-04-01 In 1944 the Nobel Prize winning physicist Erwin Schrödinger published a groundbreaking little book called What Is Life In fewer than one hundred pages he argued that life was not a mysterious or inexplicable phenomenon as many people believed but a scientific process like any other ultimately explainable by the laws of physics and chemistry Today more than sixty years later members of a new generation of scientists are attempting to create life from the ground up Science has moved forward in leaps and bounds since Schrödinger s time but our understanding of what does and does not constitute life has only grown more complex An era that has already seen computer chip implanted human brains genetically engineered organisms genetically modified foods cloned mammals and brain dead humans kept alive by machines is one that demands fresh thinking about the concept of life While a segment of our national debate remains stubbornly mired in moral quandaries over abortion euthanasia and other right to life issues the science writer Ed Regis demonstrates how science can and does provide us with a detailed understanding of the nature of life Written in a lively and accessible

style and synthesizing a wide range of contemporary research What Is Life is a brief and illuminating contribution to an age old debate **Life as Energy** Alexis Mari Pietak,2011 To many modern scientists a living thing is not significantly different from a lifeless object understood in terms of its basic parts genes and molecules Whereas science has given us many wonderful things it has also taken away something essential our ability to consider life seriously as a unique form of energy Alexis Pietak an exciting new scientific thinker argues that the livingness of a life form is a very real kind of energy that we must recognize along with other kinds of energy such as heat and light In this book Dr Pietak builds an entirely new holistic and rational science of life that could significantly enhance our understanding of individual life forms ecological systems and even human sustainability on our planet This original and groundbreaking book highlights a crucial missing element in mainstream science **Life's Devices** Steven Vogel,2025-05-27 An entertaining and informative book that explores how living things contend with nonbiological reality Life on Earth is subject to the pull of gravity the properties of air and water and the behavior of diffusing molecules yet such physical factors are constraints that drive evolution and offer untold opportunities to creatures of all sizes In this lively introduction to the science of biomechanics Steven Vogel invites you to wonder about the design of the plants and animals around us You will learn why a fish swims more rapidly than a duck can paddle why healthy trees more commonly uproot than break how sharks manage with such flimsy skeletons and why a mouse can easily survive a fall onto any surface from any height With an illuminating foreword by Rob Dunn this Princeton Science Library edition of Life s Devices includes examples from every major group of animals and plants along with illustrative problems and suggestions for experiments that require only common household materials **What is Life? : The Physical Aspect of the Living Cell, & Mind and Matter** Erwin Schrödinger,1967 **The Seven Mysteries of Life** Guy Murchie,1981 **Life Processes and Living Things** LIFE.,2001 **Life from Light** Michael Werner,Thomas Stockli,2007-06-01 In 1923 Therese Neumann a nun in Southern Germany stopped eating and drinking Apart from the wafer given at Mass she did not eat again despite living for a further 35 years Other similar cases have been reported over the years often holy men from the East and have taken on something of a mythical status However they remain obscure enough to be brushed aside by modern scientists Michael Werner presents a new type of challenge to sceptics A fit family man in his 50s he has a doctorate in Chemistry and is the managing director of a research institute in Switzerland In this remarkable account he describes how he stopped eating in 2001 and has survived perfectly well without food ever since **The Tree of Life** George W. Carey,2014-03 This Is A New Release Of The Original 1917 Edition **Wonders of Life** Brian Cox,Andrew Cohen,2013 In another acclaimed Wonders series Prof Brian Cox turns his knowledge and enthusiasm to explore the fundamental principles that enabled life to begin and thrive on Earth In this beautiful and definitive series Prof Cox tells the 3 7 billion year story of how a few basic ingredients gave birth to the complex and unique phenomenon we call life Revealing how everything in the universe from the smallest microbe to the largest cluster of galaxies is constructed from the same fundamental building

blocks and is subject to the same laws of nature Wonders of Life tells the story of the amazing diversity and adaptability of life through the processes that govern it Visiting spectacular locations including the flooded Taal Volcano on the Philippine island of Luzon the Australian outback and the Borneo rainforests it uncovers the secrets of life in the most unexpected locations and poses the question could the conditions for life be repeated elsewhere in the universe Cover **The Stuff of Life** Eric P. Widmaier,2003-09 In The Stuff of Life Eric P Widmaier deconstructs the fundamental processes of the human body and focuses on those vital biological substances that aren't particularly well understood By examining the blueprints that dictate what we are Widmaier answers questions including Why are some fats worse than others Is cholesterol actually good for anything How does the stomach digest food Why do we need to breathe and why can't we hold our breath for very long How does a single carbon atom contribute to the difference between a man and a woman Where does our energy come from The Stuff of Life answers these and many more common questions about how the body works in a concise easy to read handbook complete with illustrations **Life Evolving** Christian De Duve,2023 In just half a century humanity has made an astounding leap in its understanding of life This book discusses what we've learned in this time ranging from the tiniest of cells to the future of our species and of life itself It will fascinate readers curious about the world around them
