**Clinical Anesthesia** John G. Brock-Utne, MD, PhD, FFA(SA),2011-08-09 All anesthesiologists eventually face the fear of a near miss when a patient's life has been put at risk. Learning from the experience is crucial to professionalism and the ongoing development of expertise. Drawing on forty plus years of practice in major metropolitan hospitals in the United States, Norway, and South Africa, John Brock Utne MD presents 80 carefully selected cases that provide the basis for lessons and tips to prevent potential disaster. The cases emphasize problem centered learning and span a broad range of topics from an outbreak of operating room infection, could it be the anesthesia equipment complications of fiberoptic intubations and problems with epidural drug pumps to performing an urgent tracheostomy for the first time, working with an aggressive surgeon, and what to do when a patient falls off the operating table during surgery. 80 true story clinical near misses, never before published, ideal for problem centered learning. Recommendations, references, and discussions accompany most cases, a rich basis for teaching discussions both in or out of the operating room. Settings include sophisticated as well as rudimentary anesthetic environments. Complements the author's other case book, *Clinical Anesthesia Near Misses and Lessons Learned*, Springer 2008.

**More Case Studies of Near Misses in Clinical Anesthesia** John G. Brock-Utne,2018-05-10 Building off of the popular *Case Studies of Near Misses in Clinical Anesthesia*, Dr Brock Utne and dozens of international contributors provide the reader with all of the information needed to diagnose, prevent, and treat a potential disaster in clinical anesthesia. Each clinical case is presented complete with solutions and discussions about the problems, making recommendations and references for further reading. *More Case Studies of Near Misses in Clinical Anesthesia* includes cases on a general anesthesia in a patient who has had a recent eye operation, a case of a spinal fracture, extubating a patient in the ICU, and an intraoperative cold ischemic hand. The cases emphasize problem centered learning and span a broad range of topics, ideal for problem centered learning. This book includes interesting cases from the author's and his colleagues' 40 year anesthesia career. The purpose is to present near miss cases and the etiology of the problems. This is a great book for anyone interested, even peripherally in anesthesia and critical care medicine. It would be a great read for medical students or student registered nurse anesthetists as well as residents and practitioners. It is such an easy read that it can be picked up and put down quickly. Martin Dauber Doody's Book Reviews, December 2011.
