The Royal Marsden Manual of Clinical Nursing Procedures Lisa Dougherty, Sara Lister, 2015-03-05 Nationally recognised as the definitive guide to clinical nursing skills The Royal Marsden Manual of Clinical Nursing Procedures has provided essential nursing knowledge and up to date information on nursing skills and procedures for over 30 years Now in its 9th edition this full colour manual provides the underlying theory and evidence for procedures enabling nurses to gain the confidence they need to become fully informed skilled practitioners Written with the qualified nurse in mind this manual provides up to date detailed evidence based guidelines for over 200 procedures related to every aspect of a person's care including key information on equipment the procedure and post procedure guidance along with full colour illustrations and photos Following extensive market research this ninth edition contains the procedures and changes in practice that reflect modern acute nursing care includes thoroughly reviewed and updated evidence underpinning all procedures is organised and structured to represent the needs of a patient along their care pathway integrates risk management into relevant chapters to ensure it is central to care contains revised procedures following hands on testing by staff and students at Kingston University is also available as an online edition *Journal of the American Statistical Association*, 2008 **Monte Carlo Statistical Methods** Christian Robert, George Casella, 2013-03-14 Monte Carlo statistical methods particularly those based on Markov chains are now an essential component of the standard set of techniques used by statisticians This new edition

has been revised towards a coherent and flowing coverage of these simulation techniques with incorporation of the most recent developments in the field. In particular the introductory coverage of random variable generation has been totally revised with many concepts being unified through a fundamental theorem of simulation. There are five completely new chapters that cover Monte Carlo control, reversible jump, slice sampling, sequential Monte Carlo and perfect sampling. There is a more in depth coverage of Gibbs sampling which is now contained in three consecutive chapters. The development of Gibbs sampling starts with slice sampling and its connection with the fundamental theorem of simulation and builds up to two stage Gibbs sampling and its theoretical properties. A third chapter covers the multi stage Gibbs sampler and its variety of applications. Lastly chapters from the previous edition have been revised towards easier access with the examples getting more detailed coverage. This textbook is intended for a second year graduate course but will also be useful to someone who either wants to apply simulation techniques for the resolution of practical problems or wishes to grasp the fundamental principles behind those methods. The authors do not assume familiarity with Monte Carlo techniques such as random variable generation with computer programming or with any Markov chain theory; the necessary concepts are developed in Chapter 6. A solutions manual which covers approximately 40% of the problems is available for instructors who require the book for a course.
