Cost Benefit Analysis Concepts And Practice 4th Edition Solutions:

Sustainability Solutions Axel Lindfors, 2020-04-08 Sustainable development is one of the most influential visions guiding future societies. Encompassed within its vision are various domains where improvements are desirable such as social equity, environmental degradation, climate change. In the work towards sustainable development, firms, government authorities, and individuals face various practical challenges tied to these sustainability domains. When facing these challenges, they may implement sustainability solutions that are framed in the context of contributing to sustainable development. This thesis deals with a particular sub-set of such sustainability solutions, namely integrative and multi-functional solutions. These solutions are characterized by the ability to provide different functions through value creation within several different sustainability domains and require organisations or units of organisations to further integrate material, energy, and informational flows in order to implement the solution. Integrative and multi-functional solutions may play an important part in the transition towards sustainable societies since the integration of material, energy, and informational flows may bring with it synergistic benefits. Furthermore, the contribution of these solutions to several different sustainability domains reduces the risk of problem shifting and it may be more cost-efficient to have one multi-functional sustainability solution than to have one for each sustainability-related challenge. However, if integration and multi-functionality are desirable characteristics of future socio-technological systems, we need ways to systematically assess them and facilitate their implementation. When it comes to the assessment, there is a need to find an assessment methodology that can handle capturing the synergistic benefits and multiple functions of such solutions. Furthermore, the methodology also has to conform to the value pluralism inherent to sustainable development. Dealing with this value pluralism when trying to assess which solution among many to implement can be challenging as comparative judgements have to handle potentially conflicting value orientations, goals, empirics, and ontologies. As for the facilitation of their implementation, integrative and multi-functional solutions tend to be more difficult or at least different to implement than traditional single-minded solutions since they require traditionally separate organisations to cooperate. Therefore, this thesis aims to contribute to understanding the process of implementing integrative and multi-functional solutions. Specifically, the thesis explores how to select indicators for assessment, how assessments may aid decision makers to deal with the value pluralism of sustainable development when making comparative judgements, and how to strengthen the internal capacity of groups of actors to engage in collective action. Regarding the selection of indicators, the thesis suggests two different pathways. Either one may base indicator selections on stakeholder discussions where stakeholders come to a consensus around which indicators are important to assess, or one may base indicators on operationalising pre-defined sustainability objectives, namely sorting, contextualising, and reformulating pre-defined sustainability objectives so that they fit the purpose of the assessment. A mix of both pathways is also possible. In other words, using both stakeholder discussions and the operationalisation of pre-defined sustainability

objectives to motivate and justify the selection of indicators As for how assessments may aid decision makers the thesis advocates for a discursive approach based on the primacy of decision support tools over decision making tools Meaning that the tools should support informed decisions but not make them for the decisionmaker Here contributions are made in the form of motivations for the discursive qualitative approach to decision making and exemplify how decision support tools may be designed and a method is presented and developed that enables this kind of informed comparative judgements This method builds on multicriteria decision analysis methodology but makes a few key contributions to the selection of indicators mentioned previously and to how to compare different alternatives and judge which of the alternatives is the preferred Finally contributions are made to the practice of facilitating integrative and multi functional solutions through showing how the theory of institutional capacity building can be used to guide design development and evaluation of interventions aimed at facilitating such solutions Institutional capacity building represents the ability of groups of actors to engage in collective action something that seems to be often needed to implement integrative and multi functional solutions Historically this theory has been used to study how different events influenced the capacity of actors to engage in collective action However in research performed within the bounds of this thesis the theory is expanded for use in a proactive manner thereby contributing with insights and inspiration to others that may seek to facilitate the implementation process of integrative and multi functional solutions

Innovative and Agile Contracting for Digital Transformation and Industry 4.0 Shalan, Mohammad Ali, Algarni, Mohammed Ayedh, 2020-12-18 Digital transformation is reshaping the business arena as new successful digital business models are increasing agility and presenting better ways to handle business than the traditional alternatives Industry 4.0 affects everything in our daily lives and is blurring the line between the physical the biological and the digital This created an environment where technology and humans are so closely integrated that it is impacting every activity within the organizations Specifically contracting processes and procedures are challenged to align with the new business dynamics as traditional contracts are no longer

fitting today's agile and continuously changing environments. Businesses are required to facilitate faster, more secure, soft and real-time transactions while protecting stakeholders' rights and obligations. This includes agile contracts which are dynamically handling scope changes, smart contracts that can automate rule-based functions, frictionless contracts that can facilitate different activities, and opportunity contracts that look toward the future. Innovative and Agile Contracting for Digital Transformation and Industry 4.0 analyzes the consequences, benefits, and possible scenarios of contract transformation under the pressure of new technologies and business dynamics in modern times. The chapters cover the problems, issues, complications, strategies, governance, and risks related to the development and enforcement of digital transformation contracting practices. While highlighting topics in the area of digital transformation and contracting such as artificial intelligence, digital business, emerging technologies, and blockchain, this book is ideally intended for business engineering and technology practitioners and policy makers, along with practitioners, stakeholders, researchers, academicians, and students interested in understanding the scope, complexity, and importance of innovative contracts and agile contracting.

Event Impact John Armbricht, Tommy D. Andersson, 2017-10-02. Events are increasingly used instrumentally to achieve goals of society such as cultural development, destination branding, or economic development. Event impacts are, however, routinely measured from a purely economic perspective. Event Impact fills an important niche and a void in the literature on events by taking a holistic approach, incorporating issues like value creation, experiential value, value measurement, sustainability, and impact assessment. It is one of the first books devoted to comprehensively dealing with the subject of event impacts, combining the ideas of an international group of academics to tackle an expanding area of research that cannot be met by the work of a single researcher. Methodological concepts such as triple impact assessment, cost-benefit analysis, travel cost method, and Q-sort are combined, applied, and tested in an event context, creating a unique book that broadens and deepens our knowledge about event impacts, theoretically, methodologically, as well as empirically. This book was originally published as a special issue of the Scandinavian Journal of Hospitality and Tourism.

Budget Tools Greg G. Chen, Lynne A. Weikart, Daniel W. Williams, 2014-11-04. The thoroughly updated and expanded Second Edition of Greg G. Chen, Lynne A. Weikart, and Daniel W. Williams' Budget Tools: Financial Methods in the Public Sector brings together scores of exercises that will take students through the process of public budgeting, from organizing data through analysis and presentation. This thoroughly revised text has been restructured; it now has 30 compact modules to focus on individual skills and enhance flexibility, and is reorganized to cover more straightforward skills early in the book and more complex tools later on. Using budgets from all levels of government as well as from nonprofit organizations, the authors give students the opportunity to work with real budgeting data to cover a range of topics and skills. Budget Tools provides instruction in the techniques and implementation of budgeting skills at a granular level to support a wide range of approaches to teaching the subject.
