Fano, Richard Brooks Electromagnetic Adler, Lanren Zhu, 1950 **Electromagnetic Fields, Energy, and Forces** Robert M. Fano, 1972 Fields, Energy and Forces Robert M. Fano, 1960 **Electromagnetic Fields, Energy and Forces** Robert Mario Fano, Lan Jen Chu, Richard Brooks Adler. 1986 Electromagnetic Fields, Energy, and Forces Robert M. Fano, Lan Jen Chu, Richard B. Adler.1963 Field, Force, Energy and Momentum in Classical Electrodynamics (Revised Edition) Masud Mansuripur, 2017-08-29 The classical theory of electrodynamics is based on Maxwell's equations and the Lorentz law of force This book begins with a detailed analysis of these equations and proceeds to examine their far reaching consequences The traditional approach to electrodynamics treats the microscopic equations of Maxwell as fundamental with electric charge and electric current as the sole sources of the electric and magnetic fields Subsequently polarization and magnetization are introduced into Maxwell's equations to account for the observed behavior of material media. The augmented equations known as Maxwell's macroscopic equations are considered useful for practical applications but are also ultimately reducible to the more fundamental microscopic equations In contrast this textbook treats Maxwell's macroscopic equations as the foundation of classical electrodynamics and treats electrical charge electrical current polarization and magnetization as the basic constituents of material media. The laws that govern the distribution of electromagnetic energy and momentum in space time are also introduced in an early chapter then discussed in great detail in subsequent chapters The text presents several examples that demonstrate the solution of Maxwell's equations in diverse situations aiming to enhance the reader's understanding of the flow of energy and momentum as well as the distribution of force and torque throughout the matter field systems under consideration This revised edition of Field Force Energy and Momentum in Classical Electrodynamics features revised chapters some of which include expanded discussions of fundamental concepts or alternative derivations of important formulas The new edition also features three additional chapters covering Maxwell's equations in spherical coordinates Chapter 10 the author's recent discussion and streamlined proof of the Optical Theorem Chapter 13 and the fascinating connections between electromagnetism and Einstein's special theory of relativity Chapter 15 A new appendix covers the SI system of units that has been used throughout the book The book is a useful textbook for physics majors studying classical electrodynamics It also serves as a reference for industry professionals and academic faculty in the fields **Integral Methods in Low-Frequency Electromagnetics** Pavel Solin, Ivo of optics and advanced electronics Dolezel, Pavel Karban, Bohus Ulrych, 2009-08-11 A modern presentation of integral methods in low frequency electromagnetics This book provides state of the art knowledge on integral methods in low frequency electromagnetics Blending theory with numerous examples it introduces key aspects of the integral methods used in engineering as a powerful alternative to PDE based models Readers will get complete coverage of The electromagnetic field and its basic characteristics An overview of solution methods Solutions of electromagnetic fields by integral expressions Integral and integrodifferential methods Indirect solutions of electromagnetic fields by the boundary element method Integral equations in the solution of selected coupled problems Numerical methods for integral equations All computations presented in the book are done by means of the authors own codes and a significant amount of their own results is included At the book s end they also discuss novel integral techniques of a higher order of accuracy which are representative of the future of this rapidly advancing field Integral Methods in Low Frequency Electromagnetics is of immense interest to members of the electrical engineering and applied mathematics communities ranging from graduate students and PhD candidates to researchers in academia and practitioners in industry
