W. Klapheke, B. C. Spradlin, J. L. Easterday, 1965 This report discusses state of the art information and techniques concerned with indications of potential degradation and catastrophic failure in electronic components The objective of this survey is to present a comprehensive description of past present and future planned work on preindicators of failure for certain electronic components This study is intended to provide basic information for future development in automatic checkout equipment The following electronic parts were covered in the survey semiconductors transistors diodes and microcircuits resistors capacitors inductors computer cores other items used in a computer and vacuum tubes Such items as wire insulation lamps relays and rotary devices were not considered Precursors of failure have been investigated for electronic components but few have been identified at the present time Most of these investigations were undertaken as part of programs directed at physics of failure screening or accelerated testing The results of this study show that predictors of

failure for semiconductors transistors diodes and microcircuits have received more attention than other types of parts Current noise l f noise and infrared emission profiles show promise as precursors that would apply to all types of semiconductors Apparently computer cores and inductors are the least considered Author Radio News ,1921 Some issues 1943 July 1948 include separately paged and numbered section called Radio electronic engineering edition called Radionics edition in 1943 **Vocational Education : State Instruction Materials for ...** Curriculum and Instructional Materials Center (Okla.),Texas Education Agency.
