

Find $y[n]=x[n]*h[n]$ for all integer values of n

Solution

In this problem we will pick $x[n]$ to flip because it is shorter so will be convenient throughout the solution steps.

Step 1: Write both signals $x[n]$ and $h[n]$ as function of i such that: $x[i]$ and $h[i]$

Office,1972 **Fractional Dynamical Systems: Methods, Algorithms and Applications** Piotr Kulczycki,Józef

Korbicz, Janusz Kacprzyk, 2022-01-04 This book presents a wide and comprehensive spectrum of issues and problems related to fractional order dynamical systems. It is meant to be a full fledged comprehensive presentation of many aspects related to the broadly perceived fractional order dynamical systems which constitute an extension of the traditional integer order type descriptions. This implies far reaching consequences both analytic and algorithmic because in general properties of the traditional integer order systems cannot be directly extended by a straightforward generalization to fractional order systems modeled by fractional order differential equations involving derivatives of a non integer order. This can be useful for describing and analyzing for instance anomalies in the behavior of various systems, chaotic behavior etc. The book contains both analytic contributions with state of the art and theoretical foundations, algorithmic implementation of tools and techniques and finally some examples of relevant and successful practical applications. **Nonlinear Vision:**

Determination of Neural Receptive Fields, Function, and Networks Robert B. Pinter, 2018-05-04 This text brings to vision research a treatment different from that often found in books on the subject in its emphasis on nonlinear aspects of vision from human perception to eye cells of the fly. There is considerable emphasis on mathematics which forms not only models but the algorithms for processing data. Subject Guide to Books in Print, 1983 **Transmission Lines With**

Pulse Excitation George Metzger, 2012-12-02 Transmission Lines with Pulse Excitation aims to provide engineers with a guide to the solution of the problem on the behavior of a pulse signal on a transmission line. The book begins with an introduction to the general equations for transmission lines and the simplest pulse, the unit step. Chapters II and III present the numerical and graphical representation of the methods of traveling waves. Chapter IV is devoted to the study of the problem on the propagation of an arbitrary pulse on an arbitrary line. The final chapter describes the behavior of a line in the sinusoidal steady state. The text will be highly useful to radio engineers and students of engineering. **Handbook of**
