Stage Lighting Second Edition Richard E.

Dunham, 2018-10-16 *Stage Lighting The Fundamentals* is written specifically for introductory stage lighting courses. The book begins with an examination of the nature of light perception and color, then leads into a conversation of stage lighting equipment and technicians. Lamps, luminaires, controls, dimming, and electricity form the basis of these chapters. The book also provides a detailed explanation and overview of the lighting design process for the theatre and several other traditional forms of entertainment. Finally, the book explores a variety of additional areas where lighting designers can find related future employment, such as concert and corporate lighting, themed design, architectural and landscape lighting, and computer animation. New for this edition: enlarged full color illustrations, photographs, light plots, and examples of lighting design; updated information on LED lighting and equipment; expanded discussion of the practical use of color as a designer; expanded discussion of psychological/perceptual effects of color; new discussion of color mixing through light sources that make use of additive mixing; expanded discussion of industry professions; expanded discussion and illustrations relating to photometrics; expanded discussion and examples of control protocols and new equipment; and updated designer profiles along with the addition of still more designer profiles. *Application of Intelligent Systems in Multi-modal Information Analytics* Vijayan Sugumaran, A. G. Sreedevi, Zheng Xu, 2022-05-07 This book provides comprehensive coverage of the latest advances and trends in information technology science and engineering. Specifically, it addresses a number of broad themes including multimodal informatics, data mining, agent-based and multi-agent systems for health and education informatics, which inspire the development of intelligent information technologies. The contributions cover a wide range of topics such as AI applications and innovations in health and education informatics, data and knowledge management, multimodal application management, and web/social media mining for multimodal informatics. Outlining promising future research directions, the book is a valuable resource for students, researchers, and professionals, and a useful reference guide for newcomers to the field. This book is a compilation of the papers presented in the 4th International Conference on Multi-modal Information Analytics, held online on April 23, 2022. *Show Networks and Control Systems, Second Edition* John Huntington, 2017-11-02 *Show Networks and Control Systems*, the industry standard since 1994, is both a learning guide for beginners and a reference for experienced technicians. With its unique combined focus on computers, networks, and control systems, the book covers the art and practice of using these tools for live shows such as concerts, theatre productions, theme park attractions, themed retail installations, cruise ship shows, museum exhibits, interactive media projects, and traditional performing arts. The book offers an in-depth examination of the technology used behind the scenes in lighting, lasers, audio, video, stage machinery, animatronics, special effects, and pyrotechnics, and shows how to control the technique used to interconnect and synchronize two or more show systems. In this extensively revised and updated second edition, after three editions with the previous title *Control Systems for Live Entertainment*, Huntington draws on more than three decades of experience in the field and classroom to clearly explain what goes on behind the scenes and inside the machines that bring bold performances to life in real-world settings. Lighting Richard E. Dunham, 2015-10-30 The book's organization follows a layered approach that builds on basic principles Light as a Medium Part 1 Tools of a Lighting Designer Part 2 Design Fundamentals Part 3 and Lighting Applications Part 4 This presents students with a practical and logical sequence when learning basic concepts The full spectrum of the lighting design process is presented in detail giving students an example of how one might develop a lighting design from script analysis through concept and plot development and all the way to an opening This detailed process with a step by step design approach gives students a plan to work from which they can later modify as they mature and gain confidence as designers The text contains a more comprehensive discussion of basic technology light as a physical phenomena and methodology of designs than is found in most introductory texts bridging the gap between introductory and advanced lighting courses The text will appeal to theatrical designers who want to venture into areas of lighting like architectural or virtual lighting design while at the same time gaining a solid grounding in the fundamentals of lighting design Lighting Design will also benefit illuminating engineers who want to move away from mere computational approaches in lighting and on to explore techniques along the design approaches of theatrical lighting design The final 9 chapters cover many specialty areas of lighting design highlighting the unique and shared qualities that exist between the different aspects of these elements Discussions involve traditional entertainment areas like theatre as well as lesser known facets of the industry including film video landscape lighting retail museum lighting virtual lighting concert spectacle performances and architectural lighting Models of design tasks demonstrate the actual use and development of plots sections schedules photometrics tables and cut sheets rather than simply talking about what they are This hands on approach provides students with a firm understanding of how to actually use these tools and processes
