GENERAL DESCRIPTION

The Electro-Voice S6120 bass module is a compact, low-frequency enhancement system

designed for sound reinforcement. Through the extensive use of computer-aided design and modeling, Electro-Voice engineers have developed a state-of-the-art portable system that combines the advantages of a long-throw 12-inch woofer in a high-impact, polypropylene structural-foam cabinet that is light in weight (only 32.2 lb overall).

LOW-FREQUENCY DRIVER DESCRIPTION

The DL12sb low-frequency driver was specially developed for the S6120. Its shallow-cone/deep-frame geometry provides a very high peak-excursion ability of nearly one inch. At the heart of this driver is a magnetic structure optimized to yield the best possible Thiele-Small parameters to match the tuned enclosure.

A specially modified magnet structure is used so that it is physically impossible for the voice coil to ever hit the back plate ("bottom out"). Also, there is added clearance between the spider and the speaker frame, so the spider cannot strike the frame, another problem usually encountered in woofers used for long-excursion applications. The woofer features beryllium copper lead wires, a low-mass edge-wound voice coil and high-temperature materials. The part of the magnet structure adjacent to the coil is insulated using the exclusive EV PROTEP™ process (U.S. Patent #4,547,632). The coil is driven by a massive, 16-lb magnet structure.

ENCLOSURE DESCRIPTION

The enclosure is constructed of high-impact polypropylene structural foam. It provides a stiff and extremely durable enclosure. Molded into the cabinet are an integral carrying handle and a stand socket for mounting on 1 1/2-inch stands such as the Electro-Voice model 1008K. Rubber feet that are attached to the bottom of
