Norman,2005 From Gutenberg to the Internet presents 63 original readings from the history of computing networking and
telecommunications arranged thematically by chapters Most of the readings record basic discoveries from the 1830s through
the 1960s that laid the foundation of the world of digital information in which we live These readings some of which are
illustrated trace historic steps from the early nineteenth century development of telegraph systems the first data networks
through the development of the earliest general purpose programmable computers and the earliest software to the
foundation in 1969 of ARPANET the first national computer network that eventually became the Internet The readings will
allow you to review early developments and ideas in the history of information technology that eventually led to the
convergence of computing data networking and telecommunications in the Internet The editor has written a lengthy
illustrated historical introduction concerning the impact of the Internet on book culture It compares and contrasts the
transition from manuscript to print initiated by Gutenberg s invention of printing by moveable type in the 15th century with
the transition that began in the mid 19th century from a print centric world to the present world in which printing co exists
with various electronic media that converged to form the Internet He also provided a comprehensive and wide ranging
annotated timeline covering selected developments in the history of information technology from the year 100 up to 2004 and
supplied introductory notes to each reading Some introductory notes contain supplementary illustrations **Official**
